Sunroof Drain

Around the inner
portion of the sunroof
is a trough that
collects and directs
water that seeps in
through the seal, just

Access Free 2002 Cadillac

like the lower rear of a convertible top. Not high-tech, simple, yet ingenious in design.

There are four rubber drain tubes running out of the trough, two in front and two in front. The rule is do not use compressed air to clean them as this will blow the tubes off the nipple connectors and you

Numerical procedures based on the 2-D and 3-D full potential equations and the 2-D Navier-Stokes equations were developed to study the effects of leading and trailing edge flap motions on the aerodynamics of

Access Free 2002 Cadillac

parallel airfoil-vortex interactions and on the aerodynamics and acoustics of the more general self-generated rotor blade vortex interactions (BVI). For subcritical interactions, the 2-D results indicate that the trailing edge flap can be used to alleviate the impulsive loads experienced by

the airfoil. For
supercritical
interactions, the
results show the
necessity of using a
leading edge flap,
rather than a trailing
edge flap, to alleviate
the interaction.

Results for various
time dependent flap
motions and their
effect on the predicted

loads, differential pressures, and the free vortex trajectories are presented. For the OLS model rotor, contours of a BVI noise metric were used to quantify the effects of the trailing edge flap on the size and directivity of the high/low intensity noise region(s).

Average reductions in

the BVI noise levels
on the order of 5 dB
with moderate power
penalties on the order
of 18 pct. for a four
bladed rotor and 58
pct. for a two bladed
rotor were obtained.
