This new edition has been extensively updated to reflect developments in Georgia politics and government since 2007—a decade that has seen three presidential election cycles, two midterm elections, and a census. Updates reflect not only changes in how Georgia is governed but also the economic and social trends helping to drive those changes. These include the continued growth and dispersal of His panic and Asian populations; the decline, by a variety of measures, of rural areas; and the moderating effect of probusiness government factions on social conservative agendas. This edition maintains the book's comparative approach, which examines the state from three revealing perspectives. This allows readers to determine the extent to which Georgia is similar to its peers on such topics as the length and features of the constitution, the organization of the state government, and the nature of policies. All this allows students and scholars to have a better understanding of the political and economic dynamics of Georgia and the relationship of those dynamics to national political and economic developments. The result is a thorough, up-to-date resource on Georgia's dynamic political system. Features: -Coverage of trends and events since the prior edition appeared in 2007 -Analysis of the most recent state elections -A rewritten chapter on the judiciary that reflects greater representation of women and minorities on the bench and a sharp rise in Republican appointees -A rewritten chapter on policy, with added detail on such topics as transportation, the environment, education, social welfare, and public safety and security -Extensive revisions to sections on the U.S. Constitution -The removal of a chapter on public opinion so that its contents can be more tightly woven throughout the book -Greater attention to the increased power of interest groups -Acknowledgment throughout of the impact of the web and social media in politics and government

The Special Supplemental Nutrition Program for Women, Infants, and Children (WIC)

began 40 years ago as a pilot program and has since grown to serve over 8 million pregnant women, and mothers of and their infants and young children. Today the program serves more than a quarter of the pregnant women and half of the infants in the United States, at an annual cost of about \$6.2 billion. Through its contribution to the nutritional needs of pregnant, breastfeeding, and post-partum women; infants; and children under 5 years of age; this federally supported nutrition assistance program is integral to meeting national nutrition policy goals for a significant portion of the U.S. population. To assure the continued success of the WIC, Congress mandated that the Food and Nutrition Service of the U.S. Department of Agriculture (USDA) reevaluate the program's food packages every 10 years. In 2014, the USDA asked the Institute of Medicine to undertake this reevaluation to ensure continued alignment with the goals of the Dietary Guidelines for Americans. In this third report, the committee provides its final analyses, recommendations, and the supporting rationale.

The Food, Conservation, and Energy Act of 2008

directed the U.S. Dept. of Agr. to conduct a 1-year study to assess the extent of areas with limited access to affordable and nutritious food, identify characteristics and causes of such areas, consider how limited access affects local populations, and outline recommend. to address the problem. This report presents the findings of the study, which include results from two conferences of national and internat. authorities on food deserts and a set of research studies. It also includes reviews of existing literature, a national-level assessment of access to large grocery stores and supermarkets, analysis of the economic and public health effects of limited access, and a discussion of existing policy interventions. How we produce and consume food

has a bigger impact on Americans' well-being than any other human activity. The food industry is the largest sector of our economy; food touches everything from our health to the environment, climate change, economic inequality, and the federal budget. From the earliest developments of agriculture, a major goal has been to attain sufficient foods that provide the energy and the nutrients needed for a healthy, active life. Over time, food production, processing, marketing, and consumption have evolved and become highly complex. The challenges of improving the food system in the 21st century will require systemic approaches that take full account of social, economic, ecological, and evolutionary factors. Policy or business interventions involving a segment of the food system often have consequences beyond the original issue the intervention was meant to address. A Framework for Assessing Effects of the Food System develops an analytical framework for assessing effects associated with the ways in which food is grown, processed, distributed, marketed, retailed, and consumed in the United States. The framework will allow users to recognize effects across the full food system, consider all domains and dimensions of effects, account for systems dynamics and complexities, and choose appropriate methods for analysis. This report provides example applications of the framework based on complex questions that are currently under debate: consumption of a healthy and safe diet, food security, animal welfare, and preserving the environment and its resources. A Framework for Assessing Effects of the Food System describes the U.S. food system and provides a brief history of its evolution into the current system. This report identifies some of the real and potential implications of the current system in terms of its health, environmental, and socioeconomic effects along with a sense for the complexities of the system, potential metrics, and some of the data needs that are required to assess the effects. The overview of the food system and the framework described in this report will be an essential resource for decision makers, researchers, and others to examine the possible impacts of alternative policies or agricultural or food processing practices.
