2017 global chemical industry mergers and acquisitions outlook. Global chemical mergers and acquisitions (M&A) activity is expected to increase in 2017, but geopolitical factors such as protectionism could pose a challenge to achieving the levels of record activity the industry experienced in 2015 and 2016.

2017 global chemical industry mergers and acquisitions outlook

2017 outlook for M&A in insurance, reinsurance and global risk Last year, we characterised 2015 as the year the "mega deal". Whilst we do not expect this level of volume to repeat in 2016/2017, there remain compelling "push" and "pull" factors for global mergers and acquisitions (M&A) to continue (for a number of years) in our the insurance, (re)insurance and global risk sectors.

2017 outlook for M&A in insurance, reinsurance and global risk

Regional outlook In the Americas, buoyant activity in the United States M&A market is anticipated in 2017. While M&A activity in Brazil remains depressed, it is recovering steadily with the economy. Within Europe, the United Kingdom should continue to be an attractive market for both strategic and ...

2017 Global Chemical Industry M&A Outlook | Deloitte UK

While global Chemical M&A activity is expected to increase in 2017, geopolitical factors could prevent the industry from achieving the record levels experienced in 2015 and 2016. Higher cash levels on corporate balance sheets, low levels of innovation, and a low growth macroeconomic outlook are expected to drive M&A volumes.

Kevin Uphill, chairman of Avondale, explains what drove growth in M&A activity in 2016 and whether it is sustainable in 2017. Only a savant could truly have foreseen the geo-political turmoil of the past year. ...

The OECD Skills Outlook 2017 shows how countries can make the most of global value chains, socially and economically, by investing in the skills of their populations.

Global activity is firming broadly as expected. Manufacturing and trade are picking up, confidence is improving, international financing conditions remain benign, and commodity prices are stabilizing. Growth in emerging market and developing economies (EMDEs) is set to recover, as obstacles to growth in commodity exporters diminish, while activity in commodity importers remains robust. Risks to the global outlook remain tilted to the downside. These include increased trade protectionism, elevated economic policy uncertainty, the possibility of financial market disruptions, and, over the longer term, weaker potential growth. A policy priority for EMDEs is to rebuild monetary and fiscal space that could be drawn on were such risks to materialize. Over the longer term, structural policies that support investment and trade are critical to boost EMDE productivity and potential growth. In addition to

discussing global and regional economic developments and prospects, this edition of Global Economic Prospects includes two Special Focus essays of critical importance for emerging and developing economies: an analysis of fiscal positions in EMDEs and a deeper look at the type of firms most affected by post-crisis trade weakness. Global Economic Prospects is a World Bank Group Flagship Report that examines global economic developments and prospects, with a special focus on emerging market and developing countries, on a semiannual basis (in January and June). The January edition includes in-depth analyses of topical policy challenges faced by these economies, while the June edition contains shorter analytical pieces.

In 2008, the weight of developing and emerging economies in the global economy tipped over the 50% mark for the first time. Since then, Perspectives on Global Development has been tracking the shift in global wealth and its impact on developing countries. How much longer can the dividends of ...

The African Economic Outlook 2017 presents the continent's current state of affairs and forecasts its situation for the coming two years.

The global upswing in economic activity is strengthening. Global growth, which in 2016 was the weakest since the global financial crisis at 3.2 percent, is projected to rise to 3.6 percent in 2017 and to 3.7 percent in 2018. The growth forecasts for both 2017 and 2018 are 0.1 percentage point stronger compared with projections earlier this year. Broad-based upward revisions in the euro area, Japan, emerging Asia, emerging Europe, and Russia—where growth outcomes in the first half of 2017 were better than expected—more than offset downward revisions for the United States and the United Kingdom. But the recovery is not complete: while the baseline outlook is strengthening, growth remains weak in many countries, and inflation is below target in most advanced economies. Commodity exporters, especially of fuel, are particularly hard hit as their adjustment to a sharp step down in foreign earnings continues. And while short-term risks are broadly balanced, medium-term risks are still tilted to the downside. The welcome cyclical pickup in global activity thus provides an ideal window of opportunity to tackle the key policy challenges—namely to boost potential output while ensuring its benefits are broadly shared, and to build resilience against downside risks. A renewed multilateral effort is also needed to tackle the common challenges of an integrated global economy.

After strong growth in 2017 and early 2018, global economic activity slowed notably in the second half of last year, reflecting a confluence of factors affecting major economies. China's growth declined following a combination of needed regulatory tightening to rein in shadow banking and an increase in

trade tensions with the United States. The euro area economy lost more momentum than expected as consumer and business confidence weakened and car production in Germany was disrupted by the introduction of new emission standards; investment dropped in Italy as sovereign spreads widened; and external demand, especially from emerging Asia, softened. Elsewhere, natural disasters hurt activity in Japan. Trade tensions increasingly took a toll on business confidence and, so, financial market sentiment worsened, with financial conditions tightening for vulnerable emerging markets in the spring of 2018 and then in advanced economies later in the year, weighing on global demand. Conditions have eased in 2019 as the US Federal Reserve signaled a more accommodative monetary policy stance and markets became more optimistic about a US-China trade deal, but they remain slightly more restrictive than in the fall.

The region is seeing a modest growth uptick, but this is not uniform and the medium-term outlook remains subdued. Growth is projected to rise to 3.4 percent in 2018, from 2.8 percent in 2017, on the back of improved global growth, higher commodity prices, and continued strong public spending. About 3/4 of the countries in the region are predicted to experience faster growth. Beyond 2018, growth is expected to plateau below 4 percent, modestly above population growth, reflecting continued sluggishness in the oil-exporting countries and sustained growth in non-resource-intensive countries. A number of countries (Burundi, DRC, South Sudan, and parts of the Sahel) remain locked in internal conflict resulting in record levels of refugees and Internally Displaced Persons, with adverse spillovers to neighboring countries.

This proceedings volume provides current research on emerging issues in business, economics and finance in the global economy with particular emphasis on Eastern Europe. Featuring selected papers from the 2017 International Economics Conference in Sibiu (IECS) organized by the Lucian Blaga University of Sibiu, Romania, the contributing chapters consider new business models, theories, practices and instruments from advanced and emerging economies in the context of recent global trends. After over 20 years of increasing openness and liberation of the world economy, recent events in regions such as Europe, USA and Asia have created challenges to the idea of globalization and integration. There is a delay between the real-world economic changes and the reflection of such changes in the economic research literature. The 2017 IECS conference and the enclosed papers aim to fill this gap in the study of globalization, covering diverse topics such as business administration, sustainability, corporate social responsibility, finance, accounting, tourism and business informatics.

Asia is expected to grow by about 51/2 percent this year, accounting for nearly two-thirds of global

growth, and the region remains the world's most dynamic by a considerable margin. But despite the strong outlook, policymakers must remain vigilant. While risks around the forecast are broadly balanced for now, they are skewed firmly to the downside over the medium term. Key risks include those of further market corrections—possibly triggered by inflation surprises and/or faster-than-expected monetary tightening in advanced economies—a shift toward protectionist policies, and an increase in geopolitical tensions.

Over the ten-year Outlook period, agricultural markets are projected to remain weak, with growth in China weakening and biofuel policies having less impact on markets than in the past.
