With MIT’s App Inventor 2, anyone can build complete, working Android apps—without writing code! This complete tutorial will help you do just that, even if you have absolutely no programming experience. Unlike books focused on the obsolete Google version, Learning MIT App Inventor is written from the ground up for MIT’s dramatically updated Version 2. The authors guide you step-by-step through every task and feature, showing you how to create apps by dragging, dropping, and connecting puzzle pieces—not writing code. As you learn, you’ll also master expert design and development techniques you can build on if you ever do want to write code. Through hands-on projects, you’ll master features ranging from GPS to animation, build high-quality user interfaces, make everything work, and test it all with App Inventor’s emulator. (You won’t even need an Android device!) All examples for this book are available at theapplanet.com/appinventor Coverage includes: Understanding mobile devices and how mobile apps run on them Planning your app’s behavior and appearance with the Designer Using the Blocks Editor to tell your app what to do and how to do it Creating variables and learning how to use them effectively Using procedures to group and reuse pieces of code in larger, more complicated apps Storing data in lists and databases Using App Inventor’s gaming, animation, and media features Creating more sophisticated apps by using multiple screens Integrating sensors to make your app location-aware Debugging apps and fixing problems Combining creativity and logical thinking to envision more complex apps

The papers cover topics such as games and sustainability; games for math and programming; games and health; games and soft skills; games and management; games and learning; game development and assessment; and mobile games.

This popular text for primary trainees in teaching primary ICT has been updated in line with the new computing curriculum. What do you need to know to teach ICT and computing in primary schools? How do you teach it? This book provides practical guidance on how to teach ICT and the computing curriculum in primary schools alongside the necessary subject knowledge. It explores teaching and learning with applications and technologies, addressing the role of the professional teacher with regards to important issues such as e-safety. This Sixth Edition is updated in line with the new curriculum for computing. It includes new material on how to integrate programming and computational thinking and explores how to harness new tools such as blogging and social media to enrich learning and teaching. Written in an accessible way, it will help trainees to develop confidence in their own approach to teaching. ICT and computing is both a subject and a powerful teaching and learning tool throughout the school curriculum and beyond, into many areas of children’s learning lives. This text highlights the importance of supporting children to become discerning and creative users of technology as opposed to passive consumers.

The seven volumes LNCS 12249-12255 constitute the refereed proceedings of the 20th International Conference on Computational Science and Its Applications, ICCSA 2020, held in Cagliari, Italy, in July 2020. Due to COVID-19 pandemic the conference was organized in an online event. Computational Science is the main pillar of most of the present research, industrial and commercial applications, and plays a unique role in exploiting ICT innovative technologies. The 466 full papers and 32 short papers presented were carefully reviewed and selected from 1450 submissions. Apart from the general track, ICCSA 2020 also include 52 workshops, in various areas of computational sciences, ranging from computational science technologies, to specific areas of computational sciences, such as software engineering, security, machine learning and artificial intelligence, blockchain technologies, and of applications in many fields.
