A lively and accessible introduction to themes and debates in archaeological theory for students of all levels. Archaeological Theory is a relatable, accessible, reader-friendly first step into the world of theory for archaeology students. Recognizing that many students shy away from the study of theory for fear that the material is too difficult or obscure, Archaeological Theory maintains that any student can develop an understanding of theory and that a knowledge of theory will lead to better practice. As one of the leading texts for introductory courses in archaeology and archaeological theory, it has provided many students with the essential foundation for a complete education in the discipline. With a focus on clarifying the history and development of archaeological theory, this valuable text serves as a roadmap to the different schools of theory in archaeology, clarifying the foundations of these schools of thought, the relationships between them, and the ideas that distinguish each from the other. Students will also learn about the relationship between archaeology and cultural and political developments, the origins of New and 'post-processual' archaeology, and current issues shaping the field. Written in a clear and informal style and incorporating examples, cartoons, and dialogues, this text provides an ideal introduction for students at all levels. The revised third edition has been updated with new and revised chapters and an expanded glossary and bibliography, as well as new readings to guide further study. Engages readers with informal and easy-to-understand prose, as well as examples, cartoons, and informal dialogues. Prepares students to understand complex topics and current and perennial issues in the field such as epistemology,

agency, and materiality in the context of archaeological practice Discusses current developments in associated disciplines New and revised chapters on the material turn, politics and other issues, and an expanded glossary and bibliography with updated reading suggestions Offers expanded coverage of materiality, cultural-historical archaeology, evolutionary theory, and the work of scholars of diverse backgrounds and specializations Engaging and illuminating, *Archaeological Theory* is an indispensable resource for undergraduate and graduate students in archaeology and related disciplines.

Archaeological Theory in the New Millennium provides an account of the changing world of archaeological theory and a challenge to more traditional narratives of archaeological thought. It charts the emergence of the new emphasis on relations as well as engaging with other current theoretical trends and the thinkers archaeologists regularly employ. Bringing together different strands of global archaeological theory and placing them in dialogue, the book explores the similarities and differences between different contemporary trends in theory while also highlighting potential strengths and weaknesses of different approaches. Written in a way to maximise its accessibility, in direct contrast to many of the sources on which it draws, *Archaeological Theory in the New Millennium* is an essential guide to cutting-edge theory for students and for professionals wishing to reacquaint themselves with this field.

Now in a revised and updated second edition, this volume provides an authoritative account of the current status of archaeological theory, as presented by some of its major exponents and innovators over recent decades. It summarizes the latest developments in the field and looks to its future, exploring some of the cutting-edge ideas at the forefront of the discipline. The volume captures the diversity of contemporary archaeological theory. Some authors argue for an approach close to the natural sciences, others for an engagement with cultural debate about representation of the past. Some minimize the relevance of culture to societal change, while others see it as central; some focus on the contingent and the local, others on long-term evolution. While few practitioners in theoretical archaeology would today argue for a unified disciplinary approach, the authors in this volume increasingly see links and convergences between their perspectives. The volume also reflects archaeology's new openness to external influences, as well as the desire to contribute to wider debates. The contributors examine ways in which archaeological evidence contributes to theories of evolutionary psychology, as well as to the social sciences in general, where theories of social relationships, agency, landscape and identity are informed by the long-term perspective of archaeology. The new edition of *Archaeological Theory Today* will continue to be essential reading for students and scholars in archaeology and in the social sciences more generally.

applying critical thinking skills to archaeological questions and evidence.

Using archaeological case studies from around the world, this volume evaluates the implications of providing alternative interpretations of the past. These cases also examine if multivocality is relevant to local residents and non-Anglo-American archaeologists and if the close examination of alternative interpretations can contribute to a deeper understanding of subjectivity and objectivity of archaeological interpretation.

American archaeology today encompasses a huge range of approaches and draws eclectically on a multitude of academic disciplines. Until now, however, there has been no book seeking to separate the main strands and traditions of research and present a rounded picture of American archaeological thought in all its diversity. The seventeen essays in *Archaeological Thought in America* describe recent theoretical advances and present substantive interpretations of prehistoric data drawn from a variety of cultures and time-frames, including Mesoamerica, Central Asia, India and China. The contributors include many of the leading North American archaeologists of this generation.

collection of subjects that are too often - and inconveniently - treated in separate publications. It provides a survey of archaeological method and theory, as well as the application of physical and biological sciences in archaeological research. Every aspect of archaeological work is represented, from the discovery process to the ultimate disposition of materials. Thus the reader will find entries on subject matter covering: * disciplinary theory * legislation affecting the work of archaeologists * pre-excavation surveying * excavation methodology * on-site conservation techniques * post-excavation analysis The rapid evolution of analytical technology is often superficially treated or not covered at all in textbooks or other commonly available sources. Here, the latest refinements in techniques such as radiometric dating, stable isotopic analysis, and the PCR technique of DNA analysis are presented clearly and authoritatively. The discussion of these techniques is amplified by including results of the work of professionals conducting interdisciplinary research and by covering the methodological enhancements provided by the physical and natural sciences. Cultural property legislation, regardless of its country of origin, has affected how archaeologists conduct their work. This encyclopedia covers all major U.S. legislation developed for the protection of cultural property, including the recent Native American Graves Protection and Repatriation Act, and offers a substantial article on worldwide legislation concerning the reburial of human remains and its effects on the present and future practice of archaeology. Without some sort of conservation program at the point of excavation, valuable materials may be inadvertently contaminated or

destroyed. Many simple and low-cost techniques to promote both sample integrity and long-term preservation for major classes of materials are described in this volume. Traditional treatments of method and theory usually focus on prehistoric periods and are limited in their geographic range. This volume includes discussions based on various historical periods on different continents, as reflected in entries such as Historical Archaeology, Industrial Archaeology, Medieval Archaeology, and Classical Archaeology.
