A Map of Socrates's Apology (ΑΠΟΛΟΓΙΑ ΣΟΚΡΑΤΟΥΣ) 1. First Part: Apology proper 17a–18a Opening: Socrates plays down his rhetorical skills and promises a plain defence. He justifies the way he is going to defend himself. 18b–20c In order to understand the charge, Socrates considers the history of his unpopularity. He alludes to Aristophanes's Clouds (18d, 19c), where he ...

Socrates - Socrates - Life and personality: Although the sources provide only a small amount of information about the life and personality of Socrates, a unique and vivid picture of him shines through, particularly in some of the works of Plato. We know the names of his father, Sophroniscus (probably a stonemason), his mother, Phaenarete, and his wife, Xanthippe, and we know that he had three ...

His most famous student was Plato (l. c. 428/427-348347 BCE) who would honor his name through the establishment of a school in Athens (Plato's Academy) and, more so, through the philosophical dialogues he wrote featuring Socrates as the central character. Whether Plato's dialogues accurately represent Socrates' teachings continues to be debated but a definitive answer is unlikely to be reached ...

~ Socrates from Plato's account of the trial of Socrates. Skepticism is the tradition and philosophy that views human knowledge as unverifiable and colored by perspective. Socrates is viewed as having skeptical leanings as he views knowledge of one's own ignorance as the most important type of knowledge.

Never be lost in the sexual market place again! Most people have an impoverished concept of the today's sexual marketplace and their romantic interests suffer accordingly. Furthermore, their behavioral stratagem does not adequately satisfy their need for intimacy and connection. Many have grown accustomed to losing their heart in the process of trying. Others still hold deep mistrust and skepticism regarding the viability of relationships, that they actively eschew them. It doesn't help that culture, society and gender politics effectively promotes isolation, loneliness and for far, far too many people the very real potential of becoming a Darwinian failure. In The Map, A Personal Guide to the Sexual Marketplace, the author creates a graphic illustration of today's sexual marketplace and proves throughout it, that a picture is worth a thousand words for men and women in today's dating environment. In doing so, he encourages a sense of adventure, boldness and confidence in navigating the challenges in our social and cultural environment then couples that with simple productive advice, delivered with a bit of sizzle. The author has a profound belief that "the sexes are meant for each other". That we are naturally compatible and complimentary to each other, but society, culture, sexual politics and ignorance to human nature have taken us seriously awry. He wants to take the idea that we're meant for each other and turn it into a social movement by transforming one individual and relationship at a time. After leveraging his professional skills and talents as an architect to organize knowledge, plan, design and guide action to change his own life, he now helps other men, women and couples to navigate today's sexual marketplace by leveraging the same approach he utilizes in architecture in orchestrating a cross-discipline team of professional by combining anthropology, biology, history, sociology and psychology to create a structural framework for living. This, coupled with his professional experience, allows him to create the vision and plan they need to achieve their life and relationship goals.

The author shares his experiences teaching philosophy to senior citizens, and describes what he learned from them about aging, love, and the nature of a full life

A Companion to Science, Technology, and Medicine in Ancient Greece and Rome brings a fresh perspective to the study of these disciplines in the ancient world, with 60 chapters examining these topics from a variety of critical and technical perspectives. Brings a fresh perspective to the study of science, technology, and medicine in the ancient world, with 60 chapters examining these topics from a variety of critical and technical perspectives Begins coverage in 600 BCE and includes sections on the later Roman Empire and beyond, featuring discussion of the transmission and reception of these ideas into the Renaissance Investigates key disciplines, concepts, and movements in ancient science, technology, and medicine within the historical, cultural, and philosophical contexts of Greek and Roman society Organizes its content in two halves: the first focuses on mathematical and natural sciences; the second focuses on cultural applications and interdisciplinary themes 2 Volumes

This book introduces the reader to dialectical reasoning, a kind of thinking found in ancient East Asia and Greece as well as modern Europe and elsewhere in the contemporary world. Here, we focus on Zeno, Socrates, Kant, and Marx, with appendices on Karl Popper and the Frankfurt School. Studying these sources from different regions and periods, we see that the thinking is essentially the same. A similar formal pattern recurs: dialectical thought is always oppositional and self-relational. This book is written in the belief that dialectical thought is understandable and relevant to many kinds of persons. One does need to have a degree in philosophy to be moved by the great dialecticians. One may even be a dialectician without academic training.

For today's readers, the great Italian philosopher of history Giambattista Vico (1668-1744) can be startlingly relevant to the social and educational divisiveness we confront at century's end: here Giuseppe Mazzotta, one of the leading Italianists in the United States, shows how much Vico, properly read, can bring to an understanding of contemporary social problems. To explore Vico's body of thought in all its monumental complexity, Mazzotta highlights the place of poetry, or "writerliness," in Vico's educational project, which links literature, history, religion, philosophy, and politics. The New Map of the World is the first book since Benedetto Croce's The Philosophy of G. B. Vico (1911) to interpret the immense range of Vico's creativity. Beginning with Vico's autobiography, Mazzotta explains that Vico's heroic attempt to unite the arts and sciences was meant to offer a desperately needed political unity to modern society. In contrast to past thematic studies of Vico that focus on a single one of his ideas, The New Map of the World explores the vital interaction of the issues that fascinated him: his educational and political project, his sense of the necessity for a new way of conceiving authority, and his belief in the power of poetry. Mazzotta ends by examining Vico's awareness of the tragic limits of politics itself. Originally published in 1998, The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These paperback editions preserve the original texts of these important books while presenting them in durable paperback editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

Examines the technology and significant figures of cartography, including the accuracy of ancient Chinese maps, contributions by such navigators as Ferdinand Magellan and James Cook, and the development of a current Global Positioning System.

1. Metaphors and Logic Metaphors are among the most vigorous offspring of the creative mind; but their vitality springs from the fact that they are logical organisms in the ecology of l- guage. I aim to use logical techniques to analyze the meanings of metaphors. My goal here is to show how contemporary formal semantics can be extended to handle metaphorical utterances. What distinguishes this work is that it focuses intensely on the logical aspects of metaphors. I stress the role of logic in the generation and int- pretation of metaphors. While I don't presuppose any formal training in logic, some familiarity with philosophical logic (the propositional calculus and the predicate c- culus) is helpful. Since my theory makes great use of the notion of structure, I refer to it as the structural theory of m etaphor (STM). STM is a semant ic theory of m etaphor .if STM is correct, then metaphors are cognitively meaningful and are n- trivially logically linked with truth. I aim to extend possible worlds semantics to handle metaphors. I'll argue that some sentences in natural languages like English have multiple meanings: "Juliet is the sun" has (at least) two meanings: the literal meaning "(Juliet is the sun)IT" and the metaphorical meaning "(Juliet is the sun)MET". Each meaning is a function from (possible) worlds to truth-values. I deny that these functions are identical; I deny that the metaphorical function is necessarily false or necessarily true.

For those who have a philosophical interest in the foundation of Western thought as well as those whose interests in the humanities encompass the nature of the examined life, Socrates and the Irrational is both an accessible and an erudite journey into the mind of this central figure of our civilization.

This new book offers a comprehensive and accessible introduction to Frege's remarkable philosophical work, examining the main areas of his writings and demonstrating the connections between them. Frege's main contribution to philosophy spans philosophical logic, the theory of meaning, mathematical logic and the philosophy of mathematics. The book clearly explains and assesses Frege's work in these areas, systematically examining his major concepts, and revealing the links between them. The emphasis is on Frege's highly influential work in philosophical logic and the theory of meaning, including the features of his logic, his conceptions of object, concept and function, and his seminal distinction between sense and reference. Frege will be invaluable for students of the philosophy of language, philosophical logic, and analytic philosophy.
