Cultivating Accountability And Transparency During Covid ...

According to Robert Klitgaard's formula: $C = M + D - A$. Corruption equals monopoly plus discretion minus accountability. One will tend to find corruption happens when an organisation or person has monopoly power over a good or service, has the discretion to decide who will receive it and how much that person will get, and is not accountable.

In the process these systems of accountability should increase the pressure for more transparent local governance, in which corruption will be easier to bring to light and thus to curtail. But just as it took many decades for such efforts to make much headway in the industrial countries, so too quick results cannot be expected elsewhere.

Robert Gregory, "Accountability, Responsibility and Corruption: Managing the 'Public Production Process,'" in *The State under Contract*, ed. Jonathan Boston (Wellington, New Zealand: Bridget Williams Books, 1995).

Corruption is a significant problem for democracies throughout the world. Even the most democratic countries constantly face the threat of corruption and the consequences of it at the polls. Why are some governments more corrupt than others, even after considering cultural, social, and political characteristics? In *Clarity of Responsibility, Accountability, and Corruption*, the authors argue that clarity of responsibility is critical for reducing corruption in democracies. The authors provide a number of empirical tests of this argument, including a cross-national time-series statistical analysis to show that the higher the level of clarity the lower the perceived corruption levels. Using survey and experimental data, the authors show that clarity causes voters to punish incumbents for corruption. Preliminary tests further indicate that elites respond to these electoral incentives and are more likely to combat corruption when clarity is high.

Corruption in Asia ranges from the venal rent-seeking of local officials to the million-dollar bribes received by corrupt politicians; from excessive position-related consumption to future job offers in the private sector for compliant public servants; from money-laundering to 'white elephant' projects that do little more than line the pockets of developers and their political partners. The Routledge Handbook of Corruption in Asia addresses the theories, issues and trends in corruption and anticorruption reform that have emerged from this diverse experience. The book is divided into four major parts: corruption and the state; corruption and economic development; corruption and society; and controlling corruption: strategies, successes and failures. Chapters compare and contrast corruption in different social and institutional contexts, examine both successful and unsuccessful attempts to control it, and consider what lessons can be drawn from these Asian experiences. This academically rigorous and insightful book will be of interest to a wide range of students and scholars, particularly those of Asian studies, politics and sociology.

Governmental restructuring is much in vogue. Throughout the developed and developing world, governments are selling state assets, reorganising government departments, contracting out publicly funded services, and reforming their management systems.

Ethics and accountability have become important themes for modern government, as in most of the countries there is a severe crisis of legitimacy. Increasingly there is a feeling that performance management alone will not solve this crisis. Citizens also expect from politicians and public servants ethical responsible conduct. As to the ethics, however, there is a problem. Governance and new public management have raised new problems which cannot be solved by referring to the traditional bureaucratic ethics. Devolution and decentralisation processes have enhanced the responsibility of public servants. The increase of transparency and openness and the service orientation of public organisations have challenged the traditional values of discretion and equality before the rule. The growing interaction between the public and the private sector have raised the question of integrity. In light of these developments, it is important to update the ethical system, or reversibly, the traditional values of the public service can question some actual evolutions in government.

"Like honesty and clean water, ""accountability"" is invariably seen as a good thing. Conversely, the absence of accountability is associated with most of the greatest abuses in human history. Accountability is thus closely linked with the exercise of power and the legitimacy of policies and those pursuing them. This book looks at the role of evaluation and of audit as key elements in democratic accountability processes. The contributors explore the apparent paradox of there being more accountability-related activities today than ever before, at the same time as much public debate laments what is seen as a lack of actual accountability. Such a situation raises a number of questions: Is there a need for different approaches to establishing accountability or can current arrangements be modified to make them more effective? Are present practices part of the problem and are they preventing a mature debate about performance improvement taking place? How can systems awash with performance information ensure that at least some of it makes sense to a wide range of potential users? How is it that greater accountability and transparency can so quickly have become associated with concerns about perverse incentives and be seen by some as a costly burden? The volume includes detailed case studies and synthesizes up-to-date research evidence drawn from very different governmental systems, ending with practical advice for those involved in the accountability processes. In doing so, it attempts to address both conceptual ambiguities about the notion of ""accountability"" and the practical uncertainties over its implications for democratic government. This book is aimed at serious people who think about trends in the use of evaluation and audit in seeking to hold governments accountable for their actions and performance."

This volume presents a compelling package for anyone interested in public sector reform. It effectively combines a wide range of well-researched reviews of national experiences with state-of-the-art thematic chapters in key reform areas such as IT governance, public sector leadership and accountability. The result is a robust, insightful and sometimes sobering series of accounts of the promises and pitfalls of efforts to reform the institutions and practices of public governance around the world. A must-read. Paul t Hart, Australian National University This major Handbook provides a state-of-the-art study of the recent history and future development of international public management reform. Through a careful cross-country analysis spanning the last three decades this timely volume critically evaluates whether countries are converging towards a single public management model. The book goes on to investigate unresolved issues surrounding leadership, e-government, accountability and computer systems failure currently facing reformers. Shaun Goldfinch and Joe Wallis have brought together a number of eminent scholars from across Europe, Asia, North America and Australasia to explore the role of economic ideas, human resources and the state of public management reform in twelve countries. Providing a broad global overview of public management and facilitating a greater understanding of the difficult issue of reform, this book will find widespread appeal amongst academics and postgraduate students of public administration as well as practitioners in the field.

Research on government institutions is one of the most exciting intellectual areas in political science and policy studies today. Increasingly it is recognized by scholars in these fields that effective and legitimate policies depend on the design and maintenance of complex institutional arrangements. This book brings together some of the leading scholars in institutional research in The Netherlands. Their work addresses such perennially difficult questions in institutional research such as: How do we understand institutional change? How do we measure the effects of institutions on societal sectors and public policy? How do the normative foundations of government institutions influence their functioning? What are the principles of effective and legitimate institutional design? Through analysis of well-researched examples ranging from the fabled Dutch 'poldermodel', through the transformation of the welfare state, through privatizations of the Dutch telecommunications industry, to the work of welfare officials, these authors demonstrate the interpenetration of normative, empirical and design issues in institutional theory. The book is intended for scholars and graduate students in political science, public policy, public administration, and law.

The first edition of this work, published in 1993, refuted the notion that administrative ethics could not be studied empirically. In this second edition, Frederickson (public administration, University of Kansas) and Ghere (political science, University of Dayton) expand their scope to include both the managerial and individual/moral dimensions of ethical behavior, and add a new section on administrative ethics and globalization. Other sections cover organizational designs that support ethical behavior, market forces that compromise administrative ethics, and unintended outcomes of anticorruption reforms. The book is appropriate for a graduate course in public sector
