Since the publication of the previous edition, the best-selling Handbook of Public Administration enters its third edition with substantially revised, updated, and expanded coverage of public administration history, theory, and practice. Edited by preeminent authorities in the field, this work is unparalleled in its thorough coverage and comprehensive references. This handbook examines the major areas in public administration including public budgeting and financial management, human resource management, decision making, public law and regulation, and political economy. Providing a strong platform for further research and advancement in the field, this book is a necessity for anyone involved in public administration, policy, and management. This edition includes entirely new chapters on information technology and conduct of inquiry. In each area of public administration, there are two bibliographic treatises written from different perspectives. The first examines the developments in the field. The second analyzes theories, concepts, or ideas in the field 's literature.

Reviews the circumstances surrounding the Challenger accident to establish the probable cause or causes of the accident. Develops recommendations for corrective or other action based upon the Commission's findings and determinations. Color photos, charts and tables.

This is sure to be the new definitive text for urological pathology!

InfoWorld is targeted to Senior IT professionals. Content is segmented into Channels and Topic Centers. InfoWorld also celebrates people, companies, and projects.

The outcome for children with cancer has shown enormous improvement since the first edition of this book was published in 1975. In economically privileged countries, overall survival rates have now reached 80% at five years from diagnosis, and most of these young people will become long term survivors. The Oxford Textbook of Cancer in Children offers state-of-the-art descriptions of the approach needed for the optimal management of children with cancer, and guidance on current treatments available due to the advances made over the past decade. This seventh edition has been thoroughly revised and updated, including brand new chapters on cancer immunotherapy in children, and cancer in adolescents and young adults, plus expanded treatment of tumours of the brain and central nervous system. The book primarily provides clear and up-to-date clinical guidance for use in treatment settings whilst offering a useful background to the biology of individual tumour types and the history of the development of specific treatments. With an international and multi-disciplined authorship comprising of paediatric oncologists, surgeons, radiotherapists, imaging specialists, psychologists, nurses, and many others, the text illustrates how the paediatric oncology community works globally and collaboratively in order to drive forward new therapies, build our knowledge of these diseases, and achieve the common aim of curing childhood cancer. In this new edition, Professors Biondi and Caron have been joined by Professor Francis Doz, who has a distinguished international reputation, particularly in the treatment of childhood brain tumours and retinoblastoma, as well as early drug development. They have also been joined by Professor Tom Boterberg, a world renowned radio-oncologist for children with cancer. This book will be of value to paediatric oncologists, trainee paediatric oncologists, paediatric haematologists, and other professionals working in paediatric oncology: nurses, AHPs, surgeons, and clinical oncologists.
