Combining ideas from philosophy, artificial intelligence, and neurobiology, Daniel Dennett leads the reader on a fascinating journey of inquiry, exploring such intriguing possibilities as: Can any of us really know what is going on in someone else's mind? What distinguishes the human mind from the minds of animals, especially those capable of complex behavior? If such animals, for instance, were magically given the power of language, would their communities evolve an intelligence as subtly discriminating as ours? Will robots, once they have been endowed with sensory systems like those that provide us with experience, ever exhibit the particular traits long thought to distinguish the human mind, including the ability to think about thinking? Dennett addresses these questions from an evolutionary perspective. Beginning with the macromolecules of DNA and RNA, the author shows how, step-by-step, animal life moved from the simple ability to respond to frequently recurring environmental conditions to much more powerful ways of beating the odds, ways of using patterns of past experience to predict the future in never-before-encountered situations. Whether talking about robots whose video-camera "eyes" give us the powerful illusion that "there is somebody in there" or asking us to consider whether spiders are just tiny robots mindlessly spinning their webs of elegant design, Dennett is a master at finding and posing questions sure to stimulate and even disturb.

An authorized translation of this classic work, re-edited, beautifully typeset and designed, from a professional publisher dedicated to high-quality editions of Rudolf Steiner's books and lectures. The Anthroposophy of Rudolf Steiner is not a theoretical system, but the results of research based on direct observation. As Steiner's research was so vast and conducted over such a long period of time, no single book can be said to contain the whole of his spiritual teaching. However, of all his books Occult Science comes closest. Steiner even referred to it as "an epitome of anthroposophic Spiritual Science." The book systematically presents the fundamental facts concerning the nature and constitution of the human being and, chronologically, the history of the universe and humankind. Whereas the findings of natural science are derived from observations made through the senses, the findings of Spiritual Science, or Anthroposophy, are "occult" inasmuch as they arise from direct observation of realities hidden to ordinary perception. And yet these elements of humanity and the universe form the foundation of the sense world. A substantial part of Occult Science is taken up with a description of the preliminary training needed to make such spiritual observations. Given his energetic involvement in practical initiatives and extensive lecturing, Steiner had little time to write books. Of those he did write, four titles form an indispensable introduction to his later teaching: The Philosophy of Freedom (CW 4); Theosophy (CW 9); Knowledge of the Higher Worlds (CW 10); and Occult Science: An Outline (CW 13). Occult Science: An Outline is a translation from German of Die Geheimwissenschaft im Umriss (GA 13).

This book is a retrospective view of modern philosophical anthropology through the works of two of its greatest exponents. the author demonstrates how mythology, the philosophy of history and language and Vico's concept of man had as a constant referral point Malebranche's psychology with its Cartesian formulation. The idolatrous and mythopoietic imagination that is described in La Scienza Nuova (New Science) has much in common with the "pagan" mind (that is to say the mind subjugated to passions, sensitivity and fantasy that is described in La Recherche (The Search after Truth). Some of the themes discussed here are myth, the metaphoric nature of thought, idolatry, the formation of mentality, the relationships which bind passions and representations and the association of ideas through iconic images. Also discussed are other themes such as the structure of society and imagination, imitation, persuasion and social relationships, communication within society between illustrious imaginations. Moreover in Malebranche has been found a complex and complete theory of imaginative universals (universali fantastici). The philosophy of the imagination in Vico and Malebranche is translated and edited by Giorgio A. Pinton.

Eugene O'Connor's superb translation of Antonio Panormita's Hermaphroditus brings to life this little known Renaissance writer 's bawdy masterpiece. Modeled on the writings of the Roman poet Martial, Panormita's work was initially greeted with enthusiasm by humanist scholars upon publication in 1425 only to be reviled and censured as obscene by Christian apologists. O'Connor's excellent introduction offers a wealth of historical and literary information on Panormita's often profane poetry, presented here in both English and the Latin original. This new translation will be a delight to classical, neo-Latin, and Renaissance scholars interested in tracing the development of the epigram from Latin to the vernacular, and to scholars of gender and gay studies seeking to understand the popular portrayal of women and sexual themes in the early Renaissance.

First English translation of Sini ' s important work on the influence of writing and the alphabet on Western rationality.
