Balloons and Static Electricity - PhET
Example of static electricity: When a balloon is rubbed against a woolly jumper, electrons move from the sweater to the balloon. The balloon now has more – s than + s, so it now has a negative charge. The sweater loses some negative charges and so becomes positively charged. Like charges (e.g. two positives or two negatives) repel each other.

Science is unique among the disciplines since it is inherently hands-on. However, the hands-on nature of science instruction also makes it uniquely challenging when teaching in virtual environments. How do we, as science teachers, deliver high-quality experiences in an online environment that leads to age/grade-level appropriate science content knowledge and literacy, but also collaborative experiences in the inquiry process and the nature of science? The expansion of online environments for education poses logistical and pedagogical challenges for early childhood and elementary science teachers and early learners. Despite digital media becoming more available and ubiquitous and increases in online spaces for teaching and learning (Killham et al., 2014; Wong et al., 2018), PreK-12 teachers consistently report feeling underprepared or overwhelmed by online learning environments (Molnar et al., 2021; Seaman et al., 2018). This is coupled with persistent challenges related to elementary teachers' lack of confidence and low science teaching self-efficacy (Brigido, Borrachero, Bermejo, & Mellado, 2013; Gunning & Mensah, 2011). Teaching and Learning Online: Science for Elementary Grade Levels comprises three distinct sections: Frameworks, Teacher's Journeys, and Lesson Plans. Each section explores the current trends and the unique challenges facing elementary teachers and students when teaching and learning science in online environments. All three sections include alignment with Next Generation Science Standards, tips and advice from the authors, online resources, and discussion questions to foster individual reflection as well as small group/classwide discussion. Teacher's Journeys and Lesson Plan sections use the 5E model (Bybee et al., 2006; Duran & Duran, 2004). Ideal for undergraduate teacher candidates, graduate students, teacher educators, classroom teachers, parents, and administrators, this book addresses why and how teachers use online environments to teach science content and work with elementary students through a research-based foundation.

“The best magic is that which involves absolutely no sleight-of-hand, only the unexpected yet natural workings of nature. Physics, Fun, and Beyond is chock full of just this kind of magic–simple yet fascinating experiments, easy to follow and colorful drawings, and fun facts. Simply wonderful!” –Roald Hoffmann, 1981 Nobel Prize Laureate in Chemistry Pure Fun, Pure Excitement: You’;ve Never Learned Physics Like This Before! Physics is pure excitement: nothing’;s more fun than discovering how the world works and exploring its many possibilities! With Physics, Fun, and Beyond, you’;ll grab the universe in your own two hands as you build more than 110 projects that uncover the physics beneath everyday life! Most of these projects are amazingly easy to build: all you’;ll need are your everyday household tools and cheap (sometimes even free) materials. From wind tunnels to flying saucers, you’;ll learn exactly how to safely build these experiments, why they work, and what they mean. Learn about all this, and more: Step on eggs without breaking them...and understand the principles of material strength Build the “Magic Can” that teaches you about the different kinds of energy Discover why the Earth isn’;t exactly round Learn more about gravity, with the “Astronaut in the Elevator” experiment Use pendulums to visualize radio/TV frequencies and broadcasting Feel pressure by sitting on a bed of nails Build hydraulic robots to discover how you can transmit and amplify forces Construct wings and wind tunnels that show why airplanes fly Learn about optics by making bottles invisible Recreate the sun and sky to realize why the sky is blue Demonstrate the “greenhouse effect” with a homemade solar heater Get water to climb walls–as you understand cohesion and adhesion Build “wireless phones” that capture sound and make acoustics fun Create simple motors that display the basics of electromagnetism Physics, Fun, and Beyond is for kids, teenagers, teachers, parents, homeschoolers...everyone from 10 to 100 with curiosity and a passion for discovery and new challenges!
