This book provides an overview of the application of statistical methods to problems in metrology, with emphasis on modelling measurement processes and quantifying their associated uncertainties. It covers everything from fundamentals to more advanced special topics, each illustrated with case studies from the authors' work in the Nuclear Security Enterprise (NSE). The material provides readers with a solid understanding of how to apply the techniques to metrology studies in a wide variety of contexts. The volume offers particular attention to uncertainty in decision making, design of experiments (DOEX) and curve fitting, along with special topics such as statistical process control (SPC), assessment of binary measurement systems, and new results on sample size selection in metrology studies. The methodologies presented are supported with R script when appropriate, and the code has been made available for readers to use in their own applications. Designed to promote collaboration between statistics and metrology, this book will be of use to practitioners of metrology as well as students and researchers in statistics and engineering disciplines.

Metrology is an integral part of the structure of today ' world: navigation and telecommunications require highly accuratetime and frequency standards; human health and safety relies onauthoritative measurements in diagnosis and treatment, as does foodproduction and trade; global climate studies also depend onreliable and consistent data. Moreover, international tradepactices increasingly require institutions to display demonstratedconformity to written standards and specifications. As such, having relevant and reliable results of measurementsand tests in compliance with mutually recognised standards can be atechanical, commercial and statutory necessity for a company. Thisbook, the results of a working group from the French College ofMetrology and featuring chapters written by a range of experts froma variety of European countries, gives a comprehensive andinternational treatment of the subject. Academics involved inmetrology as well as people involved in the metrology capacities ofcompanies and institutions will find this book of greatinterest.
