Nutrition basics - Mayo Clinic

Nutrition is how food affects the health of the body. Food is essential—it provides vital nutrients for survival, and helps the body function and stay healthy. Food is comprised of macronutrients including protein, carbohydrate and fat that not only offer calories to fuel the body and give it energy but play specific roles in maintaining health.

ground-breaking series of four textbooks, of which Clinical Nutrition is the final. The books in the series: Provide students with the required scientific basis in nutrition, in the context of a systems and health approach. Enable teachers and students to explore the core principles of nutrition and to apply these throughout their training to foster critical thinking at all times. Each chapter identifies the key areas of knowledge that must be understood and also the key points of critical thought that must accompany the acquisition of this knowledge. Are fully peer reviewed to ensure completeness and clarity of content, as well as to ensure that each book takes a global perspective and is

applicable for use by nutritionists and on nutrition courses throughout the world. Clinical Nutrition focuses solely on the sick and metabolically compromised patient. It parallels the text on Nutrition & Metabolism in dealing with clinical nutrition on a system by system basis making the information more accessible to the student. Covering the scientific basis underlying nutritional support, medical ethics and nutritional counselling, the text ends with illustrative clinical case histories. Nutritionists, dieticians and students in these fields will find this an important resource and Libraries in universities, medical schools and establishments teaching and researching in the
