BEC Vantage. Intelligent Business intermediate is benchmarked to the Vantage level. The BEC Vantage exam tests Reading, Writing, Listening and Speaking skills and is organised as follows: Reading Test - 1 hour - divided into 5 parts; Writing Test - 45 minutes - divided into 2 parts; Listening Test - approx. 40 minutes - divided into 3 parts

This volume gathers researchers from around the world endeavouring to better understand a number of perennial issues in assessing Chinese learners of English, covering topics such as students' test performances, interactional competence and lexical knowledge, students' motivation, teachers' attitudes and assessment policy changes.

Set of 4 authentic BEC practice test papers from Cambridge ESOL

Test developers need to provide a clear explication of the language ability constructs that underpin the tests they offer in the public domain; such an explication is essential for supporting claims about the validity --- or usefulness --- of tests and test scores. This edited volume develops a theoretical framework for validating tests of second language speaking ability. The framework is then applied through an examination of the tasks in Cambridge ESOL speaking tests from a number of different validity perspectives that reflect the socio-cognitive nature of any assessment event. The chapter authors show how an understanding and analysis of the framework and its components can assist test developers to operationalise their tests more effectively, especially in relation to the key criteria that differentiate one proficiency level from another. The volume is a rich source of information on all aspects of examining speaking ability. As such, it will be of considerable interest to examination boards who wish to validate their own speaking tests in a systematic and coherent manner, as well as to academic researchers and graduate students in the field of language assessment more generally. This is a companion volume to the previously published titles *Examining Writing* and *Examining Reading*.

This volume brings together empirical research that explores interaction in a wide range of educational settings. It includes work that takes a cognitive, brain-based approach to studying interaction, as well as studies that take a social, contextual perspective. Interaction is defined quite broadly, with many chapters focusing on oral interaction as is typical in the field, while other chapters report work that involves interaction between learners and technology. Several studies describe the linguistic and discourse features of interaction between learners and their interlocutors, but others demonstrate how interaction can serve other purposes, such as to inform placement decisions. The chapters in the book collectively illustrate the diversity of contemporary approaches to interaction research, investigating interactions with different interlocutors ( learner-learner, learner-teacher), in a variety of environments (classrooms, interactive testing environments, conversation groups) and through different modalities (oral and written, face-to-face and technology-mediated).
