The Biology of Belief explores how cells receive and process information. Implications of this research radically change our understanding of life, showing that genes and DNA do not control our biology; instead, DNA is controlled by signals from outside the cell, including the energetic messages emanating from our positive and negative thoughts. For decades, genetic determinism—that is, the idea that our genes are fixed, immutable, and outside of our conscious control -- was the prevailing ...

Historically, our Judeo-Christian beliefs have led us to think that we are the intelligent creatures who were created in a separate and distinct process from all other plants and animals. This view has us looking down our noses at lesser creatures as non-intelligent life forms, especially those organisms on the lower evolutionary rungs of life.

Looks at the processes in which cells receive information, arguing that DNA is controlled by signals from outside the cell that emanate from one's positive and negative thoughts.

It has been ten years since the publication of *The Biology of Belief*, Bruce Lipton's seminal book on the relationship between mind and body that changed the way we think about our lives, our health, and our planet. During that time, research in this field has grown exponentially - Lipton's groundbreaking experiments have now been endorsed by more than a decade of rigorous scientific study. In this greatly expanded edition, Lipton, a former medical school professor and research scientist, explores his own

experiments and those of other leading-edge scientists that have unraveled in ever greater detail how truly connected the mind, body, and spirit are. It is now widely recognized that genes and DNA do not control our biology. Instead, they are controlled by signals from outside the cell, including energetic messages emanating from our thoughts. This profoundly hopeful synthesis of the latest and best research in cell biology and quantum physics puts the power to create a healthy, joyous life back in our own hands. When we transform our conscious and subconscious thoughts, we transform our lives, and in the process help humanity evolve to a new level of understanding and peace.

Why have we humans always longed to connect with something larger than ourselves? Why does consciousness inevitably involve us in a spiritual quest? Why, in short, won't God go away? Theologians, philosophers, and psychologists have debated this question through the ages, arriving at a range of contradictory and ultimately unprovable answers. But in this brilliant, groundbreaking new book, researchers Andrew Newberg and Eugene d'Aquili offer an explanation that is at once profoundly simple and scientifically precise: the religious impulse is rooted in the biology of the brain. Newberg and d'Aquili base this revolutionary conclusion on a long-term investigation of brain function and behavior as well as studies they conducted using high-tech imaging techniques to examine the brains of meditating Buddhists and Franciscan nuns at prayer. What they discovered was that intensely focused spiritual contemplation triggers an alteration in the activity of the brain that leads us to perceive transcendent religious experiences as solid and tangibly real. In other words, the sensation that Buddhists call "oneness with the universe" and the Franciscans attribute to the palpable presence of God is not a delusion or a manifestation of wishful thinking but rather a chain of neurological events that can be objectively observed, recorded, and actually photographed. The inescapable conclusion is that God is hard-wired into the human brain. In *Why God Won't Go Away*, Newberg and d'Aquili document their pioneering explorations in the field of neurotheology, an emerging discipline dedicated to understanding the complex relationship between spirituality and the brain. Along the way, they delve into such essential questions as whether humans are biologically compelled to make myths; what is the evolutionary connection between religious ecstasy and sexual orgasm; what do Near Death Experiences reveal about the nature of spiritual phenomena; and how does ritual create its own neurological environment. As their journey unfolds, Newberg and d'Aquili realize that a single, overarching question lies at the heart of their pursuit: Is religion merely a product of biology or has the human brain been mysteriously endowed with the unique capacity to reach and know God? Blending cutting-edge science with illuminating insights into the nature of consciousness and spirituality, *Why God Won't Go Away* bridges faith and reason, mysticism and empirical data. The neurological basis of how the brain identifies the "real" is nothing short of miraculous. This fascinating, eye-opening book dares to explore both the miracle and the biology of our enduring relationship with God.

Discover the secret to manifesting and maintaining the Honeymoon Effect—a state of bliss, passion,

energy, and health in the early stages of a great love—throughout your entire life Think back on the most spectacular love affair of your life—the Big One that toppled you head over heels. For most, it was a time of heartfelt bliss, robust health, and abundant energy. Life was so beautiful that you couldn't wait to bound out of bed in the morning to experience more Heaven on Earth. It was the Honeymoon Effect that was to last forever. Unfortunately for most, the Honeymoon Effect is frequently short lived. Imagine what your planetary experience would be like if you could maintain the Honeymoon Effect throughout your whole life. Bruce H. Lipton, Ph.D., best-selling author of *The Biology of Belief*, describes how the Honeymoon Effect was not a chance event or a coincidence, but a personal creation. This book reveals how we manifest the Honeymoon Effect and the reasons why we lose it. This knowledge empowers readers to create the honeymoon experience again, this time in a way that ensures a happily-ever-after relationship that even a Hollywood producer would love. With authority, eloquence, and an easy-to-read style, Lipton covers the influence of quantum physics (good vibrations), biochemistry (love potions), and psychology (the conscious and subconscious minds) in creating and sustaining juicy loving relationships. He also asserts that if we use the fifty trillion cells that live harmoniously in every healthy human body as a model, we can create not just honeymoon relationships for couples but also a "super organism" called humanity that can heal our planet.

In this life-changing book, Dr. Herbert Benson draws on his twenty-five years as a physician and researcher to reveal how affirming beliefs, particularly belief in a higher power, make an important contribution to our physical health. We are not simply nourished by meditation and prayer, but are, in essence, "wired for God." Combining the wisdom of modern medicine and of age-old faith, Dr. Benson shows how anyone can, with the aid of a caring physician or healer, use their beliefs and other self-care methods to heal over 60 percent of medical problems. As practical as it is spiritual, *Timeless Healing* is a blueprint for healing and transforming your life.

We've all heard stories of people who've experienced seemingly miraculous recoveries from illness, but can the same thing happen for our world? According to pioneering biologist Bruce H. Lipton, it's not only possible, it's already occurring. In *Spontaneous Evolution*, this world-renowned expert in the emerging science of epigenetics reveals how our changing understanding of biology will help us navigate this turbulent period in our planet's history and how each of us can participate in this global shift. In collaboration with political philosopher Steve Bhaerman, Dr. Lipton invites readers to reconsider:

- the "unquestionable" pillars of biology, including random evolution, survival of the fittest, and the role of DNA;
- the relationship between mind and matter;
- how our beliefs about nature and human nature shape our politics, culture, and individual lives; and
- how each of us can become planetary "stem cells" supporting the health and growth of our world.

By questioning the old beliefs that got us to where we are today and keep us stuck in the status quo, we can trigger the spontaneous evolution of our species that will usher in a brighter future. .
