Finding Abu Musab al Zarqawi, the leader of Al Qaeda in Iraq, had long been the U.S. military's top priority -- trumping even the search for Osama bin Laden. No brutality was spared in trying to squeeze intelligence from Zarqawi's suspected associates. But these "force on force" techniques yielded exactly nothing, and, in the wake of the Abu Ghraib scandal, the military rushed a new breed of interrogator to Iraq. Matthew Alexander, a former criminal investigator and head of a handpicked interrogation team, gives us the first inside look at the U.S. military's attempt at more civilized interrogation techniques -- and their astounding success. The intelligence coup that enabled the June 7, 2006, air strike onZarqawi's rural safe house was the result of several keenly strategized interrogations, none of which involved torture or even "control" tactics. Matthew and his team decided instead to get to know their opponents. Who were these monsters? Who were they working for? What were they trying to protect? Every day the "gators" matched wits with a rogues' gallery of suspects brought in by Special Forces ("door kickers"): egomaniacs, bloodthirsty adolescents, opportunistic stereo repairmen, Sunni clerics horrified by the sectarian bloodbath, Al Qaeda fanatics, and good people in the wrong place at the wrong time. With most prisoners, negotiation was possible and psychological manipulation stunningly effective. But Matthew's commitment to cracking the case with these methods sometimes isolated his superiors and put his own career at risk. This account is an unputdownable thriller -- more of a psychological suspense story than a war memoir. And indeed, the story reaches far past the current conflict in Iraq with a reminder that we don't have to become our enemy to defeat him. Matthew Alexander and his ilk, subtle enough and flexible enough to adapt to the challenges of modern, asymmetrical warfare, have proved to be our best weapons against terrorists all over the world.

Eliminating the terrorist threat by understanding the personalities in the network

Despite the vast body of texts inspired by warfare – from The Iliad to Maus – war writing is perpetually haunted by the notions of unrepresentability and inadequacy. War and Words examines the methods, conventions and pitfalls of constructing verbal accounts of military conflict in literature and the media. This multifocal study draws on a wide array of theoretical perspectives, including feminism, posthumanism, masculinity, trauma, spatiality and media studies, and brings together such diverse material as canonical literature, war veterans' testimonies, imaginative fiction, computer games, English curricula, and Al-Qaeda’s propaganda pieces. In five consecutive sections – “Spreading War Propaganda”, “Reconstructing War Spaces”, “Envisioning War”, “Gendering War”, and “Teaching War” – the contributors consider war in its manifold aspects: as an ideological tool used for propaganda purposes, as a spatial reconstruction performed for the critical reassessment of past conflicts, as a projection (or extrapolation) of possible future conflicts and their social repercussions, as a political statement to deconstruct the oppressive nature of violence, and, finally, as a didactic tool to foster empathy. This collection will appeal primarily to academics specialising in English and American literature, but also to those researching media, gender, and game studies.

This book follows the methodologies of complex adaptive systems research in their application to addressing the problems of terrorism, specifically terrorist networks, their structure and various methods of mapping and interdicting them as well as exploring the complex landscape of network-centric and irregular warfare. A variety of new models and approaches are presented here, including Dynamic Network Analysis, DIME/PMESII models, percolation models and emergent models of insurgency. In addition, the analysis is informed by practical experience, with analytical and policy guidance from authors who have served within the U.S. Department of Defense, the British Ministry of Defence as well as those who have served in a civilian capacity as advisors on terrorism and counter-terrorism.

As technology continues to advance, the threats imposed on these innovations also continue to grow and evolve. As such, law enforcement specialists diligently work to counteract these threats, promote national safety, and defend the individual rights of citizens. National Security and Counterintelligence in the Era of Cyber Espionage highlights technological advancements in intelligence systems and law enforcement in relation to cybercrime and reconnaissance issues. Focusing on current and emergent threats to national security, as well as the technological advancements being adopted within the intelligence field, this book is an exhaustive reference source for government officials, researchers, graduate-level students, and intelligence and enforcement specialists interested in novel measures in being implemented in the prevention of cybercrime and terrorism.

This new book provides a framework for understanding the international relations of armed groups, including terrorist organizations, insurgencies and warlords, which play an increasingly important role in the international system. Specifically, the book argues that such groups can be understood as taking part in the balance of power with states and other armed groups, as they are empirically sovereign non-state actors that are motivated by the pursuit of power and exist as part of an anarchic, self-help system. This radically new approach offers a renewed conceptualization of Neorealism, and provides new insights into debates about sovereignty, non-state actors, new wars, counterterrorism, and counterinsurgency. The approach is illustrated through case studies on Somali warlords, the security complex between the Lord’s Resistance Army (LRA), Sudanese People’s Liberation Army (SPLA), Sudan and Uganda, as well as Al Qaeda. The book provides insights into such issues as how non-state actors can be integrated into structural theories of international relations, and also offers pragmatic methodologies for the foreign policy or military practitioner, such as how to best deter terrorists.
