with a description of the etiology and psychopathology of hysteria. These topics are followed by intensive discussions on the clinical manifestations and diagnosis of hysteria and related mental disorders, including neurosis, psychosis, schizophrenia, and multiple personality.

The present-day

biologisation and neurologisation of psychiatry has dangerously de-emphasized the concern with the individual suffering soul, with the psyche in psychiatry. But if this means a gain in the scientific status of psychiatry, it is at the same time a loss for patients and

practitioners alike. Most of the contributions made to this volume build globally on the ideas of De Waelhens, known for his studies in phenomenology on Heidegger and Merleau-Ponty, as well as for his phenomenological and psychoanalytical research in psychosis. The limits of

human existence in its vulnerability, and it is exactly this vulnerability that breaks through in phenomena such as schizophrenia and paranoia.

This book investigates what was distinctive about the predisposition to psychosis Freud
