They range in size from microscopic particles to masses of many tons. The geologic diversity of asteroids and other rocky bodies of the solar system are displayed in the enormous variety of textures and mineralogies observed in meteorites. The composition, chemistry, and mineralogy of primitive meteorites collectively provide evidence for a wide variety of chemical and physical processes. This book synthesizes our current understanding of the early solar system, summarizing information about processes that occurred before its formation. It will be valuable as a textbook for graduate education in planetary science and as a reference for meteoritcists and researchers in allied fields worldwide.

Authored by two longtime researchers in tobacco science, The Chemical Components of Tobacco and Tobacco Smoke, Second Edition chronicles the progress made from late 2008 through 2011 by scientists in the field of tobacco science. The book examines the isolation and characterization of each component. It explores developments in pertinent analytical

Making the Geologic Now announces shifts in cultural sensibilities and practices. It offers early sightings of an increasingly widespread turn toward the geologic as source of explanation, motivation, and inspiration for creative responses to conditions of the present moment. In the spirit of a broadside, this edited collection circulates images and short essays from over 40 artists, designers, architects, scholars, and journalists who are actively exploring and creatively responding to the geologic depth of 'now.' Contributors' ideas and works are drawn from architecture, design, contemporary philosophy and art. They are offered as test sites for what might become thinkable or possible if humans were to collectively take up the geologic as our instructive co-designer-as a partner in designing thoughts, objects, systems, and experiences. A new cultural sensibility is emerging. As we struggle to understand and meet new material realities of earth and life on earth, it becomes increasingly obvious that the geologic is not just about rocks. We now cohabit with the geologic in unprecedented ways, in teeming assemblages of exchange and interaction among geologic materials and forces and the bio, cosmo, socio, political, legal, economic, strategic, and imaginary. As a reading and viewing experience, Making the Geologic Now is designed to move through culture, sounding an alert from the unfolding edge of the "geologic turn" that is now propagating through contemporary ideas and practices. In 1988, the first edition of Orest Subtelny's Ukraine was published to international acclaim, as the definitive history of what was at that time a republic in the USSR. In the years since, the world has seen the dismantling of the Soviet bloc and the restoration of Ukraine's independence - an event celebrated by Ukrainians around the world but which also heralded a time of tumultuous change for those in the homeland. While previous updates brought readers up to the year 2000, this new fourth edition includes an overview of Ukraine's most recent history, focusing on the dramatic political, socio-economic, and cultural changes that occurred during the Kuchma and Yushchenko presidencies. It analyzes political developments - particularly the so-called Orange Revolution - and the institutional growth of the new state. Subtelny examines Ukraine's entry into the era of globalization, looking at social and economic transformations, regional, ideological, and linguistic tensions, and describes the myriad challenges currently facing Ukrainian state and society.

The two-part, fifth edition of Advanced Organic Chemistry has been substantially revised and reorganized for greater clarity. The material has been updated to reflect advances in the field since the previous edition, especially in computational chemistry. Part A covers fundamental structural topics and basic mechanistic types. It can stand-alone; together, with Part B: Reaction and Synthesis, the two volumes provide a comprehensive foundation for the study in organic chemistry. Companion websites provide digital models for study of structure, reaction and selectivity for students and exercise solutions for instructors.

The popular AAUSC series of annual volumes for directors of university language programs strives to further scholarship in second language acquisition and teaching with regard to undergraduate programs with multi-section courses. Teaching assistant supervision, teaching assistant professional preparation, and the role of faculty and administrators in postsecondary institutions are some of the topics addressed.
