Problem: The scientific method is unrivalled as a basis for generating useful knowledge, yet research papers published in management, economics, and other social sciences fields often ignore scientific principles. What, then, can be done to increase the publication of useful scientific papers?Methods: Evidence on researchers' compliance with scientific principles was examined. Guidelines aimed at reducing violations were then derived from established definitions of the scientific method.Findings: Violations of the principles of science are encouraged by: (a) funding for advocacy research; (b) regulations that limit what research is permitted, how it must be designed, and what must be reported; (c) political suppression of scientists' speech; (d) universities' use of invalid criteria to evaluate research -- such as grant money and counting of publications without regard to usefulness; (e) journals' use of invalid criteria for deciding which papers to publish -- such as the use of statistical significance tests.Solutions: We created a checklist of 24 evidence-based operational guidelines to help researchers comply with scientific principles (valid inputs). Based on the definition of science, we then developed a checklist of seven criteria to evaluate whether a research paper provides useful scientific findings (valuable outputs). That checklist can be used by researchers, funders, courts, legislators, regulators, employers, reviewers, and journals.Originality: This paper provides the first comprehensive evidence-based checklists of operational guidelines for conducting scientific research and for evaluating the

scientific quality and usefulness of research efforts. Usefulness: Journals could increase the publication of useful papers by including a section committed to publishing all relevant and useful papers that comply with science. By using the Criteria for Useful Science checklist, those who support science could more effectively evaluate the contributions of scientists.

Sharing knowledge is what drives scientific progress - each new advance or innovation in biomedical research builds on previous observations. However, for experimental findings to be broadly accepted as credible by the scientific community, they must be verified by other researchers. An essential step is for researchers to report their findings in a manner that is understandable to others in the scientific community and provide sufficient information for others to validate the original results and build on them. In recent years, concern has been growing over a number of studies that have failed to replicate previous results and evidence from larger meta-analyses, which have pointed to the lack of reproducibility in biomedical research. On September 25 and 26, 2019, the National Academies of Science, Engineering, and Medicine hosted a public workshop in Washington, DC, to discuss the current state of transparency in the reporting of preclinical biomedical research and to explore opportunities for harmonizing reporting guidelines across journals and funding agencies. Convened jointly by the Forum on Drug Discovery, Development, and Translation; the Forum on Neuroscience and Nervous System Disorders; the National Cancer Policy Forum; and the Roundtable on Genomics and Precision Health, the workshop primarily focused on transparent reporting in preclinical research, but also considered lessons learned and best practices from clinical research reporting. This publication summarizes the presentation and discussion of the workshop.

The Publication Manual of the American Psychological Association is the style manual of choice for writers, editors, students, and educators in the social and behavioral sciences, nursing, education, business, and related disciplines.

A Short Guide to Writing about History is an ideal complement for any history course intended to teach students to think and write like historians. This engaging and practical text will teach students how to go beyond reporting the basic dates and facts of their history books and show them how to infuse their writing with their own ideas and unique perspective. Covering brief essays and the documented resource paper, the text explores the writing and researching processes, different modes of historical writing (including argument), and offers guidelines for improving style as well as documenting sources.

Interdisciplinary Research: Process and Theory is the first book that systematically guides students in how to approach and follow through on research projects that straddle disciplines. Featuring an easy-to-follow approach that is grounded in theory, it is packed with examples of interdisciplinary research from the natural sciences, the social sciences, and the humanities. Students will gain a solid foundation on how to achieve, produce, and express integration. Key Features and Benefits

- Blends practice and theory by delineating a step-by-step research process that is based in relevant scholarly literature
- Illustrates each step of the research process, using examples of professional and student work oriented toward the natural sciences, the social sciences, and the humanities
- Offers an easy-to-follow checklist so students can evaluate previous research
- Provides extensive information on the different disciplines to help students develop an understanding of disciplinary perspectives and their defining elements

Intended Audience This core text is designed for advanced undergraduate and graduate courses in interdisciplinary research methods and will be especially helpful for courses requiring research papers.

Writing in the Biological Sciences is a handy reference that new to advanced students can readily use on their own. A variety of student models prepare you for the most common writing assignments in undergraduate biology courses.

The Elements of Style William Strunk concentrated on specific questions of usage—and the cultivation of good writing—with the recommendation "Make every word tell"; hence the 17th principle of composition is the simple instruction: "Omit needless words." The book was also listed as one of the 100 best and most influential books written in English since 1923 by Time in its 2011 list.

For courses in Research Writing, Documentation Writing, and Advanced Composition. Featuring an engaging, direct writing style and inquiry-based approach, The Curious Researcher: A Guide to Writing Research Papers emphasizes that curiosity is the best reason for investigating ideas and information. An appealing alternative to traditional research texts, this popular research guide stands apart for its motivational tone, its conversational style, and its conviction that research writing can be full of rewarding discoveries. Offering a wide variety of examples from student and professional writers, this popular guide shows that good research and lively writing do not have to be mutually exclusive. Students are encouraged to find ways to bring their writing to life, even though they are writing with "facts." A unique chronological organization sets up achievable writing goals while it provides week-by-week guidance through the research process. Full explanations of the technical aspects of writing and documenting source-based papers help students develop sound research and analysis skills. The text also includes up-to-date coverage of MLA and APA styles.

Guidelines for Reporting Health Research is a practical guide to choosing and correctly applying the appropriate guidelines when reporting health research to ensure clear, transparent, and useful reports. This new title begins with an introduction to reporting guidelines and an overview of the importance of transparent reporting, the characteristics of good guidelines, and how to use reporting guidelines effectively in reporting health research. This hands-on manual also describes over a dozen internationally recognised published guidelines such as CONSORT, STROBE, PRISMA and STARD in a clear and easy to understand format. It aims to help researchers choose and use the correct guidelines for reporting their research, and to produce more completely and transparently reported papers which will help to ensure reports are more useful and are not misleading. Written by the authors of health research reporting guidelines, in association with the EQUATOR (Enhancing the QUALity and Transparency Of health Research) Network, Guidelines for Reporting Health Research is a helpful guide to producing publishable research. It will be a valuable resource for researchers in their role as authors and also an important reference for editors and peer reviewers.
