Cognitive Therapy for Suicidal Patients: Scientific and Clinical Applications crystallizes more than 3 decades of basic, clinical, and therapeutic research, providing a comprehensive review of the psychological factors associated with suicidal behavior. The authors describe their cognitive model of suicide, the instruments they developed to classify and assess suicidal behavior, and effective cognitive intervention techniques for suicidal individuals. The book includes a step-by-step protocol for cognitive therapy that is vividly illustrated in an extended case study. Individual chapters are dedicated to applying the protocol with special populations and overcoming challenges when working with suicidal patients.--pub. desc.

This acclaimed work, now in a new edition, has introduced tens of thousands of clinicians to mindfulness-based cognitive therapy (MBCT) for depression, an 8-week program with proven effectiveness. Step by step, the authors explain the "whys" and "how-tos" of conducting mindfulness practices and cognitive interventions that have been shown to bolster recovery from depression and prevent relapse. Clinicians are also guided to practice mindfulness themselves, an essential prerequisite to teaching others. More than 40 reproducible handouts are included. Purchasers get access to a companion website featuring downloadable audio recordings of the guided mindfulness practices (meditations and mindful movement), plus all of the reproducibles, ready to download and print in a convenient 8 1/2" x 11" size. A separate website for use by clients features the audio recordings only. New to This Edition *Incorporates a decade's worth of developments in MBCT clinical practice and training. *Chapters on additional treatment components: the pre-course interview and optional full-day retreat. *Chapters on self-compassion, the inquiry process, and the three-minute breathing space. *Findings from multiple studies of MBCT's effectiveness and underlying mechanisms. Includes studies of adaptations for treating psychological and physical health problems other than depression. *Audio files of the guided mindfulness practices, narrated by the authors, on two separate Web pages—one for professionals, together with the reproducibles, and one just for clients. See also the authors' related titles for clients: The Mindful Way through Depression demonstrates these proven strategies in a self-help format, with in-depth stories and examples. The Mindful Way Workbook gives clients additional, explicit support for building their mindfulness practice, following the sequence of the MBCT program. Plus, for professionals: Mindfulness-Based Cognitive Therapy with People at Risk of Suicide extends and refines MBCT for clients with suicidal depression.

Suicide is considered to be the leading cause of preventable death in prisons. While there is increasingly expansive literature examining the various risk factors associated with a likelihood of eventual prison suicide, so far this has struggled to lead to successful prevention programmes. An alternative approach is needed that seeks to understand, at the individual level, what leads a prisoner to contemplate ending their own life. This book describes how the authors developed and delivered evidence-based psychological interventions for suicide prevention in prison. The authors present a compelling argument for a psychological approach to the prevention of prison suicide, drawing upon a cognitive behavioural perspective, with chapters investigating two novel psychological therapies: Cognitive Behavioural Suicide Prevention and Problem Solving Training. The methodology behind each study is presented alongside preliminary findings emerging from the evaluations, and detailed case studies are included as exemplars of the process and content of the therapies, as well as the individual and contextual challenges to be overcome. The book provides timely research into the development of a better understanding of why prisoners engage in suicide behaviour, and the preventive interventions showing the most promise for future investigation. The Prevention of Suicide in Prison will be critical reading for clinical and forensic psychologists, psychological therapists, psychiatrists and other mental health staff working within a prison context, as well as postgraduates in training and researchers studying suicide in forensic settings.
