This book provides an overview of the emerging smart connected world, and discusses the roles and the usage of underlying semantic computing and Internet-of-Things (IoT) technologies. The book comprises ten chapters overall, grouped in two parts. Part I “ Smart Connected World: Overview and Technologies ” consists of seven chapters and provides a holistic overview of the smart connected world and its supporting tools and technologies. Part II “ Applications and Case Studies ” consists of three chapters that describe applications and case studies in manufacturing, smart cities, health, and more. Each chapter is self-contained and can be read independently; taken together, readers get a bigger picture of the technological and application landscape of the smart connected world. This book is of interest for researchers, lecturers, and practitioners in Semantic Web, IoT and related fields. It can serve as a reference for instructors and students taking courses in hybrid computing getting abreast of cutting edge and future directions of a connected ecosystem. It will also benefit industry professionals like software engineers or data scientists, by providing a synergy between Web technologies and applications. This book covers the most important topics on the emerging field of the smart connected world. The contributions from leading active researchers and practitioners in the field are thought provoking and can help in learning and further research. The book is a valuable resource that will benefit academics and industry. It will lead to further research and advancement of the field. Bharat K. Bhargava, Professor of Computer Science, Purdue University, United States

History and development of the lathe, operation, tools, and special projects. Profusely illustrated. You get everything you need to set up a lathe and get it running: history and development of the lathe, setting up and leveling the lathe, operation of the lathe, lathe tools and their application, how to take accurate measurements, plain turning (work between centers), chuck work; taper turning and boring, drilling reaming and tapping, cutting screw threads, and special classes of work. All the basics are here from sharpening drills to producing "super-finished" turned bearings, grinding valves, and turning multiple screw threads, etc.
