If you are in the electronic repair line you would know that checking electronic components in electronic boards can take up lots of your time especially if you do not know the short cut way to test it. Many of us when starting in the field of electronic repair check each electronic component one by one by removing it out from the board. This is the right way to test electronic components but it is very time consuming.

To expose each component's die for inspection, Electronica Test Labs uses a combination of mechanical package removal along with environmentally-safe, heated acid etching methods on the area of the package to be removed. Die markings, size and layout are examined and photographed for review. We compare each component die against our comprehensive database of golden component samples, original manufacturer's datasheets, and other commercially available guidelines to arrive at an unbiased ...

When developing and designing electronic devices, the electronic components mounted in them need to be tested to determine whether they have the reliability to comply with their mounting environment and use conditions. This testing ensures the device will achieve the target quality after shipment to market.
