The four volumes of Construction Technology provide a comprehensive guide to building technology from simple domestic single storey construction using traditional techniques to more complex multi-storey construction using more modern industrialised techniques. Each volume describes the technology concisely and is well illustrated with the author's own illustrations. The series provides a basic knowledge of all building activities from basic methods of construction in the early volumes through to more complex topics such as site planning, curtain walling and builders plant in later volumes. The series concentrates on the technology and avoids lengthy descriptive passages, leaving the description to the author's very detailed drawings. Volume 2 completes the coverage of conventional methods and materials of construction. As with volume 1, it deals with the construction of a small structure such as a bungalow or two-storey house. The book introduces more complex topics than are covered in volume 1. It deals with site and temporary works, e.g. simple excavations and scaffolding; substructure topics such as retaining walls and reinforced concrete foundations; simple framed buildings; floors and roof structures such as precast concrete floors and asphalt and lead-covered roofs; finishes and fittings such as simple concrete stairs; insulation; and services such as electrical and gas installations.

The 12th edition of Chudley and Greeno's Building Construction Handbook remains THE authoritative reference for all construction students and professionals. The principles and processes of construction are explained with the concepts of design included where appropriate. Extensive coverage of building construction practice, techniques and regulations representing both traditional procedures and modern developments are included to provide the most comprehensive and easy to understand guide to building construction. This new edition has been updated to reflect recent changes to the building regulations, as well as new material on modern methods of construction, greater emphasis on sustainability and a new look interior. Chudley and Greeno's Building Construction Handbook is the essential, easy-to-use resource for undergraduate and vocational students on a wide range of courses including NVQ and BTEC National, through to Higher National Certificate and Diploma, to Foundation and three-year Degree level. It is also a useful practical reference for building designers, contractors and others engaged in the construction industry.

The authors provide a comprehensive and practical presentation to many aspects of construction practice, as applied to buildings for industrial and commercial purposes. The book covers site works, plant and equipment, substructure, demolition and temporary work, and much more.

This 6th edition includes numerous revisions, amendments and additions in line with ongoing practice and legislative changes in building construction. Included are features of construction that are designed to economise and manage the use of fuel energy in buildings and limit the effect on atmospheric pollution.

'Construction Technology' provides a comprehensive introduction to every aspect of the technology of domestic low-rise construction and principal associated legislation.

A comprehensive summary of the vocabulary used across the building industry, from the preparation of an architectural brief, through creative and technical design, to construction technology and facilities management. The latest edition has several substantially revised entries as well as many new additions, including new illustrations and terms. Covering a range of disciplines across architecture and building and including both SI metric and Imperial units, this dictionary and reference work will enable students and professionals to use and understand vocabulary from other areas of expertise, and contribute to better communication.

Novel research in construction management is often distant from existing practice. This collection of reviews serves to bridge this gap under three major themes: innovation, organisation and human behaviour, and methods and tools. It outlines a series of successful collaborative projects between industry and the academic and research communities. Many of the authors have worked in technology transfer, as change agents, resolving industrially-relevant problems by using scientifically-based research. The book reveals the source of ideas, data and results to provide a useful resource for researchers, academics and graduate students, and a challenging guide for senior industry managers.
