Power Electronics is intended to be an introductory text in power electronics, primarily for the undergraduate electrical engineering student. The text is written for some flexibility in the order of the topics. Much of the text includes computer simulation using PSpice as a supplement to analytical circuit solution techniques.

With a government plagued by systemic ills and deep ideological divides, democracy, as we know it, is in jeopardy. Yet, ironically, voter apathy remains prevalent and evidence suggests standard civic education has done little to instill a sense of civic duty in the American public. While some are waiting for change to come from within, trying to influence already polarized voters, or counting down the days until the "next election," leading child and adolescent development experts Daniel Hart and James Youniss are looking to another solution: America's youth. In *Renewing Democracy in Young America*, Hart and Youniss examine the widening generation gap, the concentration of wealth in pockets of the US, and the polarized political climate, and they arrive at a compelling solution to some of the most hotly contested issues of our time. The future of democracy depends on the American people seeing citizenship as a long-term psychological identity, and thus it is critical that youth have the opportunity to act as citizens during the time of their identity formation. Proposing that 16- and 17-year-olds be able to vote in municipal elections and suggesting that schools create science-based, community-oriented environmental engagement programs, the authors expound that by engaging youth through direct citizen-participatory experiences, we can successfully create active and committed citizens. Political scientists, media commentators, and citizens alike agree that democratic processes are broken across the nation, but we cannot stop at simply showing that our political system is dysfunctional. Refreshingly lucid and unabashedly hopeful, *Renewing Democracy in Young America* is an impeccably timed call to action.

Applied Problem-Solving in Healthcare Management is a practical textbook devoted to developing and strengthening problem-solving and decision-making leadership competencies of healthcare administration students and healthcare management professionals. Built upon the University of Minnesota Master of Healthcare Administration Program's Problem-Solving Method, the text describes the "never assume" mindset and the structured method that drive evidence-based, action-oriented problem-solving. The "never assume" mindset requires healthcare leaders to understand themselves and their stakeholders, and to engage in waves of divergent and convergent thinking. This structured method guides the problem solver through the phases of defining, studying, and acting on complex interrelated organizational problems that involve multiple root causes. The book also describes how the Problem-Solving Method is complementary to quality improvement methods and can be used in healthcare organizations along with Lean, Design Thinking, and Human Centered Design. Providing step-by-step instruction including useful tips, tools, activities, and case studies, this effective resource demonstrates the utility of the method for all types of health organization settings including health systems, hospitals, clinics, population health, and long-term care. For students taking health management, capstone, and experiential learning courses, including internship and residency projects, this book allows them to test and apply their problem-solving and decision-making skills to real-world situations. Beyond the classroom, it is an indispensable resource for organizations seeking to enhance the problem-solving skills of their workforce. The authors of the text have nearly 75 years of combined experience in healthcare management, leadership, and professional consulting, and teaching and advising healthcare administration students in classrooms, on student capstone, internship and residency projects, and case competitions. Synthesizing their expertise, this text serves as a guide for those who wish to strengthen their problem-solving abilities to systematically identify, analyze, study, and solve pressing organizational challenges in healthcare settings. Key Features: Describes a mindset and a structured problem-solving method that builds leadership competencies Encourages a step-by-step problem-solving approach to define, study, and act on problems to drive action-oriented solutions Supports experiential learning and coaching for students and professionals early in their careers, applicable especially to healthcare management, capstone, and student consulting courses, internship and residency projects, case competitions, and professional development in organizations Compares the Problem-Solving Method to other complementary methods used in many healthcare organizations, including Lean, Design Thinking, and Human Centered Design

Variational Methods for the Numerical Solution of Nonlinear Elliptic Problems?addresses computational methods that have proven efficient for the solution of a large variety of nonlinear elliptic problems. These methods can be applied to many problems in science and engineering, but this book focuses on their application to problems in continuum mechanics and physics. This book differs from others on the topic by presenting examples of the power and versatility of operator-splitting methods, providing a detailed introduction to alternating direction methods of multipliers and their applicability to the solution of nonlinear (possibly nonsmooth) problems from science and engineering, and showing that nonlinear least-squares methods, combined with operator-splitting and conjugate gradient algorithms, provide efficient tools for the solution of highly nonlinear problems. The book provides useful insights suitable for advanced graduate students, faculty, and researchers in applied and computational mathematics as well as research engineers, mathematical physicists, and systems engineers.

This book constitutes the refereed proceedings of five application-oriented workshops held concurrently as EvoWorkshops 2001 in Como, Italy in April 2001. The 52 revised full papers presented were carefully reviewed and selected out of 75 submissions. The papers are organized in topical sections on graph problems, Knapsack problems, ant algorithms, assignment problems, evolutionary algorithms analysis, permutative problems, aeronautics, image analysis and signal processing, evolutionary learning, and evolutionary scheduling and timetabling.

Problem Solving with the Private Sector presents advice and solutions for fruitful government-business alliances from the perspective of everyday public management. With a focus on job training, economic development, regulation, and finance and innovation, each chapter discusses a traditional tool of government presented in a practical and applied manner, as well as the implementation of the tool with clear examples. Content-rich case studies on a wide range of policy issues, including regulatory policy, natural resources, manufacturing, financial services, and health care highlight opportunities for government and business to collaborate to pursue the public good. This book offers current and future public managers possible solutions to complex problems for effective government-business alliances in a range of settings. It is essential reading for all those studying public management, public administration, and public policy.
