A hydraulic machine for astonishing wild pigs was one of the many technological highlights the author encountered in the course of his career as a research scientist and science writer. Writing a book about them, never taking more (or less) than two printed pages for each of 146 subjects was a very special challenge. The book covers fundamentally important achievements of technology that directly impacted mankind or even profoundly changed it. Many of those highlights are quite new, at least one of them (power generation by nuclear fusion) is not available yet. But particularly ingenious things dating way back were also included, as they are the base of our technical civilization Good examples are ceramics as well as copper, bronze and iron; whole periods of history have been named for the latter three. The analog computer of Antikythera used for stellar navigation was made some 2100 years ago, gunpowder was used in China as early as 1044 A.D., the astronomical clock in the Strasburg cathedral was built in the 19th century. On the other hand, Theodor W. Hänsch and John L. Hall were granted a Nobel Prize in 2005 for a discovery that brought us extremely accurate optical clocks. And the Smartphone was a 2007 breakthrough; hundreds of millions of them have been sold since then. The basic concept of describing and explaining major technological highlights to non-scientists with just 800 words was inspired by the column "Inventions - fifty years later" in the Swiss daily "Neue Zürcher Zeitung" (NZZ), to which the author contributed on a regular base since 2007. The column was later renamed "Achievements of Technology" - no more time limits. Many of the book-chapters were taken from those sources, updated, edited and translated into English. Other sources were articles the author wrote for various newspapers and magazines. However, many highlights of technology were researched and written specifically for this book. Reading it is both fun and highly instructive.

Provides guidance to manufacturers and concumers of radio controlled clocks. WWVB is the NIST radio station located in Colorado which synchronizes radio controlled clocks.

"This book addresses the phenomenon called "interactive architecture that challenges artists, architects, designers, theorists, and geographers to develop a language and designs toward the "use" of these environments"--Provided by publisher.

Based on the popular Artech House classic, Digital Communication Systems Engineering with Software-Defined Radio, this book provides a practical approach to quickly learning the software-defined radio (SDR) concepts needed for work in the field. This up-to-date volume guides readers on how to quickly prototype wireless designs using SDR for real-world testing and experimentation. This book explores advanced wireless communication techniques such as OFDM, LTE, WLA, and hardware targeting. Readers will gain an understanding of the core concepts behind wireless hardware, such as the radio frequency front-end, analog-to-digital and digital-to-analog converters, as well as various processing technologies. Moreover, this volume includes chapters on timing estimation, matched filtering, frame synchronization message decoding, and source coding. The orthogonal frequency division multiplexing is explained and details about HDL code generation and deployment are provided. The book concludes with coverage of the WLAN toolbox with OFDM beacon reception and the LTE toolbox with downlink reception. Multiple case studies are provided throughout the book. Both MATLAB and Simulink source code are included to assist readers with their projects in the field.

Clear and accessible introduction to the concept of time examines measurement, historic timekeeping methods, uses of time information, role of time in science and technology, and much more. Over 300 illustrations.
