Japan is becoming a popular travel destination for more and more architects today. With its wide variety of architecture, it is both a source of fascination and inspiration. Over a number of years, the review Detail has been consistently documenting the construction activities which have taken place in Japan, and this book draws on the best of their experience and connections to present and analyse with plans and details the most interesting buildings from various architectural trends in contemporary Japan,

including Ando's Museum for Contemporary Art in Naoshima, Toyo Ito's Mediathek, a residential building by Kazuyo Sejima, and a temple gallery in Kyoto by Takashi Yamaguchi. Introductory essays discuss the developments in Japanese architecture, and together with portraits of not only well-known Japanese architects and offices, but also young offices such as Atelier Bow Wow, this volume provides a stimulating discussion of current Japanese building in the context of traditional architecture.

The external facades of a building are more than a protective mantle, or an intelligent skin regulating temperature and light, they also determine its very appearance. By unusual choices of materials and the use of complex technology, facades have become increasingly significant in recent years. External surfaces are being perceived as an integral part of the building and are therefore being designed as such. This volume focuses on the wide-ranging aspects of facade design, from the selection and use of materials to the advanced technical possibilities now open to the architect. A wide array of carefully selected international examples show the theory in the practice. All plans, details, and large scale sections of the facades have been researched with the high degree of competence typical of the editorial staff from the review Detail. Expert authors provide the essential information needed to plan and design facades and elucidate on the latest developments in technology and materials.

Glass offers a wide variety of possible applications for the realization of even the most ambitious designs in architecture, and in the past two decades it has experienced an unparalleled burst of innovation. For planners, this means working constantly with this high-performance material. In compact and appealing form, the completely revised Glass Construction Manual presents the current state of the art on planning and building with glass, from the history through the technical foundations all the way to the most innovative applications. Astonishing perspectives on thermal insulation and solar protection and the addition of thoughtfully selected new practical examples round off this comprehensive reference work.

Traditional building methods - such as those used in pueblos, timbered houses, or the Japanese minka - exist in fascinating diversity and create the face of a region. However, as a result of globalization they have been marginalized in many places. In the fastest developing countries in particular, a wealth of experience that goes back hundreds of years is being irretrievably lost, even though valuable insights can be gained for modern building. Using the examples of selected domestic buildings from all continents, 30 international experts demonstrate why we can still learn from vernacular architecture; they analyze the cultural context and the adaptation to topographic/climactic conditions, and focus on the local materials used as well as on the construction, the building process, and the necessary

maintenance.

"In Contemporary Curtain Wall Architecture, building-technology historian and architect Scott Murray traces the evolution of the curtain wall, from early skeleton-frame structures of the past to today's complex and technologically advanced configurations. Presenting twenty-four detailed case studies of exemplary structures completed in the last decade, he reveals the curtain wall as one of the most enduring and malleable concepts of contemporary architecture, capable of adapting intelligently to site constraints, utilizing resources efficiently, and offering unprecedented opportunities for innovations in digital design and fabrication, material detailing, and aesthetic expression." --Book Jacket.

Optimising the use of space: inspiring living concepts and layout solutions In the densely populated urban areas of Japan, small houses with unusual spatial U concepts and surprising layout solutions are emerging on narrow strips of land that would normally be considered unsuitable for home construction. Yet it's not only this sense of space, but also the sensory use of materials and a feel for aesthetics skillfully combined with traditional elements that have fascinated architects outside of Japan.

Staged paths and innovative floorplan concepts
