The official Emergency Response Guidebook (ERG) is a guide for use by transporters, firefighters, police, and other emergency services personnel who may be the first to arrive at the scene of a transportation incident involving a hazardous material, such as an oil or chemical spill. It is used by first responders in:

Does the identification number 60 indicate a toxic substance or a flammable solid, in the molten state at an elevated temperature? Does the identification number 1035 indicate ethane or butane? What is the difference between natural gas transmission pipelines and natural gas distribution pipelines? If you came upon an overturned truck on the highway that was leaking, would you be able to identify if it was hazardous and know what steps to take? Questions like these and more are answered in the Emergency Response Guidebook. Learn how to identify symbols for and vehicles carrying toxic, flammable, explosive, radioactive, or otherwise harmful substances and how to respond once an incident involving those substances has been identified. Always be prepared in situations that are unfamiliar and dangerous and know how to rectify them. Keeping this guide around at all times will ensure that, if you were to come upon a transportation situation involving hazardous substances or dangerous goods, you will be able to help keep others and yourself out of danger. With color-coded pages for quick and easy reference, this is the official manual used by first responders in the United States and Canada for transportation incidents involving dangerous goods or hazardous materials.

The ERG is the ideal guide to help when responding to transportation emergencies involving hazardous materials. It is a must-have for everyone who handles and transports dangerous goods and hazmat. This guide helps your company comply with the DOT 49 CFR 172.602 requirement that hazmat shipments be accompanied with emergency response information. The Emergency Response Guidebook is updated every 4 years - Don't be caught with the outdated 2012 ERG

NOTE: NO FURTHER DISCOUNT FOR THIS PRINT PRODUCT- OVERSTOCK SALE -Significantly reduced listprice The official Emergency Response Guidebook (ERG) is a guide for use by transporters, firefighters, police, and other emergency services personnel who may be the first to arrive at the scene of a transportation incident involving a hazardous material. It is used by first responders in (1) quickly identifying the specific or generic classification of the material(s) involved in the incident, and (2) protecting themselves and the general public during this initial response phase of the incident. The ERG is updated every three to four years to accommodate new products and technology."

Written by a hazardous materials consultant with over 40 years of experience in emergency services, the five-volume Hazmatology: The Science of Hazardous Materials suggests a new approach dealing with the most common aspects of hazardous materials, containers, and the affected environment. It focuses on innovations in decontamination, monitoring instruments, and personal protective equipment in a scientific way, utilizing common sense, and takes a risk-benefit approach to hazardous material response. This set provides the reader with a hazardous materials "Tool Box" and a guide for learning which tools to use under what circumstances. Volume One, Chronicles of Incidents and Response, takes an in-depth look at the history of hazardous materials response, points out lessons learned from these incidents, and discusses the impact on our response today. Volume Two, Standard of Care and Hazmat Planning, presents the hazardous materials legal issues and background on the Hazmat Standard of Care, including incidents where Care was violated and the repercussions felt. Volume Three, Applied Chemistry and Physics, presents chemistry and physics at the level that emergency responders will understand so they can apply the concepts using a risk management system and deal safely and effectively with hazardous materials incidents. Volume Four, Common Sense Emergency Response, covers stabilization and includes science and risk analysis and the part it plays in a successful outcome of the stabilization portion of the response. Volume Five, Hazmat Teams Spotlight, covers the history, vehicles, types of response, equipment, and resources, as well as procedures and innovations across different teams nationwide.

The ERG is primarily applicable for hazardous materials transported by highway and railway, but also is applicable for materials transported by air or waterway, as well as by pipeline. It was first issued by the US Department of Transportation in 1973, but later became a joint publication of the Department of Transportation (US DOT), Transport Canada (TC), and the Secretariat of Communications and Transportation (SCT) of Mexico, with collaboration with the Chemistry Information Center for Emergencies (CIQUIME) of Argentina. The ERG is issued every 4 years, with editions now being published in Spanish (Guía de Respuesta en Caso de Emergencia). In 1996 it was published as the North American Emergency Response Guidebook, but by the next publication in 2000 "North American" was removed due to its use by several South American countries). The ERG "is primarily a guide to aid first responders in quickly identifying the specific or generic hazards of the material(s) involved in the incident, and protecting themselves and the general public during the initial response phase of the incident" and should only be used for the "initial response phase" (about the first thirty minutes) of an incident. It is divided into six color-coded sections (white [uncolored], yellow, blue, orange, green, and a second white [uncolored]). The ERG includes over 170 "Guides" (found in the Orange Section) that identify the primary hazards associated with the applicable general category of hazardous material and general guidance on how to respond to incidents involving that general category of hazardous material. The primary purpose of ERG is to direct the emergency responders to the most appropriate of these guides, based on the incident. The ERG also provides guidance regarding recommended evacuation distances, if applicable, in the Green Section.

We regret to announce that we at Sheridan Programmers Guild will not produce a 2016 adaptation of the ERG ebook, but we will direct our users to the official NIH ERG 2016 app, which should work as well as or better than an ebook on many mobile devices. Thank you to everyone who has supported the ERG 2012: Quick Lookup! About This ebook takes the Department of Transportation data published in the Emergency Response Guidebook (ERG 2012) and presents it in a familiar form reflecting the print ERG. As an ebook, this ERG is searchable. It also includes internal links for quick access to information. For example, if an entry in the yellow section (substances by ID) references the green (isolation distances) tables, you can tap/click to jump right to the table. The color-coding of the official ERG is preserved for a familiar experience and ease of use. The ebook table of contents can be used to jump immediately to any section. This edition is up-to-date, based upon the ERG 2012 and includes all the corrections released by the DOT through April 10, 2013, which are not found in physical copies or other digital versions of the ERG. We strive to be not only the most convenient version available, but also the most accurate. The ERG 2012: Quick Lookup offers a speedy and easy platform for accessing the official DOT data. The technical implementation and presentation are unique to our edition. Now available in Spanish and French! The GRE 2012 and GMU 2012 are both available on Play. See "more from author" below, or click "The team at Sheridan Programmers Guild" at the top of this page to see the Spanish and French editions.
