Joe Rogan Experience #942 - Dan Flores ~~Environmental Ethics: Deep Ecology~~ Ecology And Cultural Theory

Cultural ecology explains that humans are part of their environment and both affect and are affected by the other. Modern cultural ecology pulls in elements of historical and political ecology as well as rational choice theory, post-modernism, and cultural materialism. "Human impacts" and "cultural landscape" are two contradictory concepts that may help to explain the past and modern flavors of cultural ecology.

### Cultural Ecology: Connecting Environment and Humans

According to cultural ecology theory, culture is shaped by the physical and biological properties of the area or region in which it is developed. For example, especially harsh winters may alter the behavior and culture of a human group by the resulting use of small, well insulated structures to sleep in.

### NACCE » Cultural ecology theory in brief

Cultural ecology is the study of human adaptations to social and physical environments. Human adaptation refers to both biological and cultural processes that enable a population to survive and reproduce within a given or changing environment. This may be carried out diachronically, or synchronically. The central argument is that the natural environment, in small scale or subsistence societies dependent in part upon it, is a major contributor to social organization and other human institutions.

Ecology is a biological term for the interaction of organisms and their environment, which includes other organisms. Cultural ecology is a theoretical approach that attempts to explain similarities and differences in culture in relation to the environment. Highly focused on how the material culture, or technology, related to basic survival, i.e., subsistence, cultural ecology was the first theoretical approach to provide a causal explanation for those similarities and differences.

The last decade has seen a dramatic increase in the attention paid by social scientists to environmental issues, and a gradual acknowledgement, in the wider community, of the role of social science in the public debate on sustainability. At the same time, the concept of 'culture', once the property of anthropologists has gained wide currency among social scientist. These trends have taken place against a growing perception, among specialist and public, of the global nature of contemporary issues. This book shows how an understanding of culture can throw light on the way environmental issues are perceived and interpreted, both by local communities and within the contemporary global arena. Taking an anthropological approach the book examines the relationship between human culture and human ecology, and considers how a cultural approach to the study of environmental issues differs from other established approaches in social science. This book adds significantly to our understanding of environmentalism as a contemporary phenomenon, by demonstrating the distinctive contribution of social and cultural anthropology to the environmental debate. It will be of particular interest to students and researchers in the fields of social science and the environment.

First Published in 1996. Routledge is an imprint of Taylor & Francis, an informa company.

The environment is perhaps most misunderstood as a static place, somewhere "out there," separated from the practices of our everyday lives. Given this assumption, environmental movements and concerns have remained mostly marginalized or denigrated in cultural studies publications, conferences, and presentations. Recent global developments have made changing this oversight and, at times, direct resistance to engaging environmental concerns a new priority. This edited collection illustrates an appreciation of the dynamic, palpable, and significant ways the environment permeates culture (and vice versa), as well as a collective commitment to the ways that cultural studies has more to offer—and to learn from—taking environmental matters to heart. Like foundational categories of identity, economics, and historical context, this collection reminds us why the environment is and should be considered relevant to any work done in the name of "cultural studies." Including research from four continents and across media, the authors offer insights on timely topics such as food, tourism, human/animal relations, forests, queer theory, indigenous rights, and water. This book was published as a special issue of Cultural Studies.

This wide-ranging and accessible contribution to the study of risk, ecology and environment helps us to understand the politics of ecology and the place of social theory in making sense of environmental issues. The book provides insights into the complex dynamics of change in 'risk societies'.

living in and utilizing 'nature' and by assimilating it into 'culture'. Indeed, the technological and cultural advancement of the species has been widely acknowledged to rest upon human domination and control of nature. Yet, by the 1960s, the idea of culture in confrontation with nature was being challenged by science, philosophy and the environmental movement. Anthropology is increasingly concerned with such issues as they become more urgent for humankind as a whole. This important book reviews the current state of the concepts of 'nature' we use, both as scientific devices and ideological constructs, and is organised around three themes:- nature as a cultural construction;- the cultural management of the environment; and- relations between plants, animals and humans.

This contemporary introduction to the principles and research base of cultural ecology is the ideal textbook for advanced undergraduate and beginning graduate courses that deal with the intersection of humans and the environment in traditional societies. After introducing the basic principles of cultural anthropology, environmental studies, and human biological adaptations to the environment, the book provides a thorough discussion of the history of, and theoretical basis behind, cultural ecology. The bulk of the book outlines the broad economic strategies used by traditional cultures: hunting/gathering, horticulture, pastoralism, and agriculture. Fully explicated with cases, illustrations, and charts on topics as diverse as salmon ceremonies among Northwest Indians, contemporary Maya agriculture, and the sacred groves in southern China, this book gives a global view of these strategies. An important emphasis in this text is on the nature of contemporary ecological issues, how peoples worldwide adapt to them, and what the Western world can learn from their experiences. A perfect text for courses in anthropology, environmental studies, and sociology.

studies, *Literature as Cultural Ecology: Sustainable Texts* outlines a new approach to the reading of literary texts. Hubert Zapf considers the ways in which literature operates as a form of cultural ecology, using language, imagination and critique to challenge and transform cultural narratives of humanity's relationship to nature. In this way, the book demonstrates the important role that literature plays in creating a more sustainable way of life. Applying this approach to works by writers such as Emily Dickinson, Edgar Allan Poe, Herman Melville, William Faulkner, Toni Morrison, Zakes Mda, and Amitav Ghosh, *Literature as Cultural Ecology* is an essential contribution to the contemporary environmental humanities.

p.122-142 mentions Australian patrilineal bands.

*Millennials and Media Ecology* explores issues pertaining to millennials and digital media ecology and studies the cultural, pedagogical, and political environments such heterogeneous generation populates. The book questions whether millennials are properly understood as a heterogeneous group, particularly by the institutions and agencies that target them, and whether they are demonstrating the ability to set out a path for themselves and take charge of their own life and future. A diverse team of expert authors review past and current studies with critical assessment of arguments and propositions, and document actual experiences of members of the millennial generation through detailed studies. Engaging with topical subject matter and current research on millennials, the chapters: Question the misunderstanding that digital tools and Internet technologies are making the younger generation "dumber" and "disengaging" them from the real world Underscore the legal and economic insights into the commodification of the younger generation as consumers rather than learners Examine the historical trajectory of media technology, and whether new practices are having an empowering effect or one of enslavement to an increasingly irreversible technological and socio-political regime
