Since 1960, with the advent of musical electronics, composers and musicians have been using ever more sophisticated machines to create sonic material that presents innovation, color and new styles: electro-acoustic, electro, house, techno, etc. music. The music of Pierre Henry, Kraftwerk, Pink Floyd, Daft Punk and many others has introduced new sounds, improbable rhythms and a unique approach to composition and notation. Electronic machines have become essential: they have built and influenced the music of the most recent decades and set the trend for future productions. This book explores the theory and practice related to the different machines which constitute the universe of musical electronics, omitting synthesizers which are treated in other works. Sequencers, drum machines, samplers, groove machines and vocoders from 1960 to today are studied in their historical, physical and theoretical context. More detailed approaches to the Elektron Octatrack sequencer-sampler and the Korg Electribe 2 groove machine are also included.

Popular Polish Electronic Music, 1970 – 2020 offers a cultural history of popular Polish electronic music, from its beginning in the late 1960s/early 1970s up to the present day, in the context of Polish economic, social and political history, and the history of popular music in this country. From the perspective of production, scene, industry and consumption, the volume considers the issue of access to electronic instruments in the 1970s and 1980s, and the variety of inspirations, such as progressive rock and folk music, that have contributed to the development of Polish electronic music as it is known today. The widespread contribution of Polish electronic music to film is also considered. This is a valuable resource for scholars and researchers of electronic music, popular music and (Eastern) European music and culture.

The Emergence of Video Processing Tools presents stories of the development of early video tools and systems designed and built by artists and technologists during the late 1960s and 70s. Split over two volumes, the contributors examine the intersection of art and science and look at collaborations among inventors, designers, and artists trying to create new tools to capture and manipulate images in revolutionary ways. The contributors include "video pioneers," who have been active since the emergence of the aesthetic, and technologists, who continue to design, build, and hack media tools. The book also looks at contemporary toolmakers and the relationship between these new tools and the past. Video and media production is a growing area of interest in art and this collection will be an indispensable guide to its origins and its future.

Americans and people throughout the world have become increasingly dependent on America's great research universities. Yet few of us truly understand to what we owe this extraordinary excellence or what we must do to keep it. From the development of technologies like the laser, the global positioning system, the MRI, radar, and even Viagra, to predicting weather patterns, American research universities are one of our most vital sources of economic growth and social welfare. They have flourished because of a system that has invested public tax dollars in their work and, more importantly, granted substantial autonomy to funding agencies and the universities. This system is now under attack, the university's preeminence endangered by the USA PATRIOT Act and other conservative policies. This revelatory and alarming book will show how this vital institution is at risk of tragically losing its dominant status and why a threat to the university is a threat to the health and wealth of our nation. This edition is in two volumes. The first volume ISBN is 9781458774071.

Musicians are always quick to adopt and explore new technologies. The fast-paced changes wrought by electrification, from the microphone via the analogue synthesiser to the laptop computer, have led to a wide range of new musical styles and techniques. Electronic music has grown to a broad field of investigation, taking in historical movements such as musique concr è te and elektronische Musik, and contemporary trends such as electronic dance music and electronica. The first edition of this book won the 2009 Nicolas Bessaraboff Prize as it brought together researchers at the forefront of the sonic explorations empowered by electronic technology to provide accessible and insightful overviews of core topics and uncover some hitherto less publicised corners of worldwide movements. This updated and expanded second edition includes four entirely new chapters, as well as new original statements from globally renowned artists of the electronic music scene, and celebrates a diverse array of technologies, practices and music.
