It covers a wide range of financial topics, including retail and investment banking, accounting, trade finance, and mergers and acquisitions.

English for the Financial Sector helps learners to prepare for a career in finance and enables those already working in the industry to improve their financial English.

In the wake of the financial crises of the late 1990s, there was a surge of interest in the systematic assessment of financial sectors, with a view to identifying vulnerabilities and evaluating the sector's developmental needs. Consequently, there has been an increased demand from financial sector authorities in many countries for information on key issues and sound practices in the assessment of financial systems and the appropriate design of policy responses. In response, Financial Sector Assessmnet presents a general analytical framework and broad guidance on approaches, methodologies and key techniques for assessing the stability and development needs of financial systems. It synthesizes current global sound practices in financial sector assessment.

Cyber risk has emerged as a key threat to financial stability, following recent attacks on financial institutions. This paper presents a novel documentation of cyber risk around the world for financial institutions by analyzing the different types of cyber incidents (data breaches, fraud and business disruption) and identifying patterns using a variety of datasets. The other novel contribution that is outlined is a quantiative framework to assess cyber risk for the financial sector. The framework draws on a standard VaR type framework used to assess various types of stability risk and can be easily applied at the individual country level. The framework is applied in this paper to the available cross-country data and yields illustrative aggregated losses for the financial sector in the sample across a variety of scenarios ranging from 10 to 30 percent of net income.

The 2008 global financial crisis brought the world's economy closer to collapse than ever before. Has enough been done to prevent another crisis?

In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of digital financial services among those who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the underlying country-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at www.worldbank.org/globalfindex.
