The Enterprise Architecture Management (EAM) discipline deals with the alignment of business and information systems architectures. While EAM has long been regarded as a discipline for IT managers, this book takes a different stance: It explains how top executives can use EAM to leverage their strategic planning and controlling processes, as well as how it can contribute to their sustainable competitive advantage. Based on the analysis of best practices from eight leading European companies from various industries, the book presents the crucial elements of successful EAM. It outlines what executives need to do in terms of governance, processes, methodologies, and culture in order to bring their management to the next level. Beyond this, the book points out how EAM could develop in the next decade, thus allowing today's managers to prepare for the future architecture management.

This book contains all refereed papers that were accepted to the second edition of the « Digital Enterprise Design & Management » (DED&M 2014) international conference that took place in Paris (France) from February 4 to February 5, 2014. These proceedings cover the most recent trends in the emerging field of Digital Enterprise, both from an academic and a professional perspective. A special focus is put on digital uses, digital strategies, digital infrastructures and digital governance from an Enterprise Architecture point of view. The DED&M 2014 conference is organized under the guidance of the Center of Excellence on Systems Architecture, Management, Economy and Strategy and benefits from the supports of both the Orange – Ecole Polytechnique – Télécom ParisTech "Innovation and Regulation" Chair and the Dassault Aviation – DCNS – DGA – Thales – Ecole Polytechnique – ENSTA ParisTech – Télécom ParisTech "Complex Systems Engineering" Chair.

This book constitutes the refereed proceedings of the 14th International Workshop on Enterprise and Organizational Modeling and Simulation, EOMAS 2018, held in Tallinn, Estonia, in June 2018. The main focus of EOMAS is on the role, importance, and application of modeling and simulation within the extended organizational and enterprise context. The 11 full papers presented in this volume were carefully reviewed and selected from 22 submissions. They were organized in topical sections on conceptual modeling, enterprise engineering, and formal methods.

Enterprises must occasionally go through radical and fundamental changes (oftentimes referred to as enterprise transformations). Many of these enterprise transformation (ET) efforts fail for different reasons - they run over budget, miss deadlines or do not deliver functionalities or other required results. Managing ETs is a multi-faceted problem that is dealt with by responsible ET managers. These ET managers need to be supplied with manifold information in order to manage the ET. A discipline that claims the ability to provide valuable input to ET management (ETM) is enterprise architecture management (EAM). However, EAM is currently not often considered as a valuable partner in managing ETs. For this reason, this research focuses on information requirements of ETM and the supply of information by EAM. In a first step, the cumulative thesis explores the field of information provision during ETs. In a second step, the gathered results are consolidated into a reference model. This model aims at substantiating the discussions about the EAM support of ETs, and provides guidance on the practice implementation. In a third step the model and its constituents are evaluated. To achieve this purpose, the thesis consists of six papers that analyze the relation between EAM and ETM using qualitative, quantitative and literature-based methods. Furthermore, they describe and present the design of the reference model as guided by the well-established design research process and address the evaluation of the designed reference model. The reference model can be used as a foundation for methods that aim at supporting ETs. To increase its applicability, different types of ET are identified based on the required information. The designed reference model provides a solid foundation for EAM practitioners to analyze how they can contribute to occurring ETs and tailor existing EAM frame-works. It further provides a foundation for ET managers to.

This volume constitutes the proceedings of the combined 7th International Workshop on Trends in Enterprise Architecture Research (TEAR 2012) and the 5th Working Conference on Practice-Driven Research on Enterprise Transformation (PRET-5), held in Barcelona, Spain, October 23-24, 2012, and co-located with The Open Group's Conference on Enterprise Architecture, Cloud Computing, and Security. Joining the forces of the two events with The Open Group Conference provided the unique opportunity for an intensive exchange between practitioners as well as for discussions on standardization efforts and academic research in the areas of enterprise transformation and enterprise architecture (EA). Based on careful reviews by at least three Program Committee members, 18 papers were chosen for inclusion in these proceedings. They were presented in six sessions on enterprise architecture management (EAM) effectivity, languages for EA, EAM and the ability to change, advanced topics in EA, governing enterprise transformations, and EA applications.

What role does communication play in the success or failure of a Enterprise Asset Management EAM project? What is Effective Enterprise Asset Management EAM? How can the value of Enterprise Asset Management EAM be defined? What new services of functionality will be implemented next with Enterprise Asset Management EAM ? How do I reduce the effort in the Enterprise Asset Management EAM work to be done to get problems solved? How can I ensure that plans of action include every Enterprise Asset Management EAM task and that every Enterprise Asset Management EAM outcome is in place? How will I save time investigating strategic and tactical options and ensuring Enterprise Asset Management EAM costs are low? How can I deliver tailored Enterprise Asset Management EAM advice instantly with structured going-forward plans? There's no better guide through these mind-expanding questions than acclaimed best-selling author Gerard Blokdyk. Blokdyk ensures all Enterprise Asset Management EAM essentials are covered, from every angle: the Enterprise Asset Management EAM self-assessment shows succinctly and clearly that what needs to be clarified to organize the required activities and processes so that Enterprise Asset Management EAM outcomes are achieved. Contains extensive criteria grounded in past and current successful projects and activities by experienced Enterprise Asset Management EAM practitioners. Their mastery, combined with the easy elegance of the self-assessment, provides its superior value to you in knowing how to ensure the outcome of any efforts in Enterprise Asset Management EAM are maximized with professional results. Your purchase includes access details to the Enterprise Asset Management EAM self-assessment dashboard download which gives you your dynamically prioritized projects-ready tool and shows you exactly what to do next. Your exclusive instant access details can be found in your book. You will receive the following contents with New and Updated specific criteria: - The latest quick edition of the book in PDF - The latest complete edition of the book in PDF, which criteria correspond to the criteria in... - The Self-Assessment Excel Dashboard, and... - Example pre-filled Self-Assessment Excel Dashboard to get familiar with results generation ...plus an extra, special, resource that helps you with project managing. INCLUDES LIFETIME SELF ASSESSMENT UPDATES Every self assessment comes with Lifetime Updates and Lifetime Free Updated Books. Lifetime Updates is an industry-first feature which allows you to receive verified self assessment updates, ensuring you always have the most accurate information at your fingertips.

This book investigates what enterprises can do and/or what should it be capable of in order to accelerate organizational changes. Therefore, a capability-based method is developed, which assists in the identification, structuring and management of capabilities. The approach is embedded in a process comprising four building blocks that provide appropriate procedures, concepts and supporting tools evolved from theory and practical use cases. The guide represents a flexible method for capability newcomers and experienced audiences to optimize enterprises' economic impacts of EAM supporting the alignment of business and IT.

Most contemporary organizations use management teams to manage and coordinate their businesses at all levels of the organizational hierarchy. Management teams typically set overall goals, strategies, and priorities, making vital organizational decisions. They discuss issues, solve problems, offer advice, and ensure various processes and units are aligned and interact efficiently. Although management teams are vital for overall organizational performance, research indicates that they are largely underused and less effective than their potential would suggest for value creation. This book provides a research-based and practical model of the characteristics of effective management teams. It looks in depth at each factor of the model, discusses the supporting research, provides examples of how the factors influence the work and effectiveness of management teams, and shares tips and tools for successfully working with management team development. It provides researchers, academics, and students of organizational behavior with an overview of the variables that empirical research has found to be robustly related to management team effectiveness and will enable leaders and management consultants to develop more effective management teams.

This book constitutes the proceedings of the 16th International Conference on Perspectives in Business Informatics Research, BIR 2017, held in Copenhagen, Denmark, in August 2017. This year the BIR conference attracted 59 submissions from 23 countries. They were reviewed by 45 members of the Program Committee, and as a result, 17 full papers and 3 short papers were selected for presentation at the conference and publication in this volume. They are organized in sections on enterprise architecture, business process management, business analytics, information systems applications, and information systems development. In addition, the summaries of the two conference keynotes are also included. This year, the conference theme was the digital transformation, which will impact most businesses, organizations and societies and call for new and radical approaches to how we adopt, use and manage IT.
