Contrary to popular belief, death is not a moment in time, such as when the heart stops beating, respiration ceases, or the brain stops functioning. Death, rather, is a process—a process that can be interrupted well after it has begun. Innovative techniques, such as drastically reducing the patient's body temperature, have proven to be effective in revitalizing both the body and mind, but studies show they are only employed in approximately half of the hospitals throughout the United States and Europe. In Erasing Death, Dr. Sam Parnia presents cutting-edge research from the front line of critical care and resuscitation medicine that has enabled modern doctors to routinely reverse death, while also shedding light on the ultimate mystery: what happens to human consciousness during and after death. Parnia reveals how medical discoveries focused on saving lives have also inadvertently raised the possibility that some form of "afterlife" may be uniquely ours, as evidenced by the continuation of the human mind and psyche in the first few hours after death. Questions about the "self" and the "soul" that were once relegated to theology, philosophy, or even science fiction are now being examined afresh according to rigorous scientific research. With physicians such as Parnia at the forefront, we are on the verge of discovering a new universal science of consciousness that reveals the nature of the mind and a future where death is not the final defeat, but is in fact reversible.

Erasing Death: The Science That Is Rewriting the Boundaries Between Life and Death reveals that death is not a moment in time. Death, rather, is a process—a process that can be interrupted well after it has begun. Innovative techniques have proven to be effective in revitalizing both the body and mind, but they are only employed in approximately half of the hospitals throughout the United States and Europe. Dr. Sam Parnia, Director of the AWARE Study (AWAreness during REsuscitation) and one of the world’s leading experts on the scientific study of death and near-death experiences (NDE), presents cutting-edge research from the front lines of critical care and resuscitation medicine while also shedding light on the ultimate mystery: What happens to human consciousness during and after death? Dr. Parnia reveals how some form of “afterlife” may be uniquely ours, as evidenced by the continuation of the human mind and psyche after the brain stops functioning. With physicians such as Dr. Parnia at the forefront, we are on the verge of discovering a new universal science of consciousness that reveals the nature of mind and a future where death is not the final defeat, but is, in fact, reversible.

Dr. Sam Parnia faces death every day. Through his work as a critical-care doctor in a hospital emergency room, he became very interested in some of his patients’ accounts of the experiences that they had while clinically dead. He started to collect these stories and read all the latest research on the subject, and then he conducted his own experiments. That work has culminated in this extraordinary book, which picks up where Raymond Moody’s Life After Life left off. Written in a scientific, balanced, and engaging style, this is powerful and compelling reading. This fascinating and controversial book will change the way you look at death and dying.

The riveting story of the exploration of the final frontier of our planet—the deep ocean—and history-making mission to reach the bottom of all five seas. Humankind has explored every continent on earth, climbed its tallest mountains, and gone into space. But the largest areas of our planet remain largely a mystery: the deep oceans. At over 36,000 feet deep, there areas closest to earth’s core have remained nearly impossible to reach—until now. Technological innovations, engineering breakthroughs and the derring-do of a team of explorers, led by explorer Victor Vescovo, brought together an audacious global quest to dive to the deepest points of all five oceans for the first time in history. The expedition pushed technology to the limits, mapped hidden landscapes, discover previously unknown life forms and began to piece together how life in the deep oceans effects our planet—but it was far from easy. Expedition Deep Ocean is the inside story of this exploration of one of the most unforgiving and mysterious places on our planet, including the site of the Titanic wreck and the little-understood Hadal Zone. Vescovo and his team would design the most advanced deep-diving submersible ever built, where the pressure on the sub is 8 tons per square inch—the equivalent of having 292 fueled and fully loaded 747s stacked on top of it. And then there were hurricane-laden ocean waters and the byzantine web of global oceanography politics. Expedition Deep Ocean reveals the marvelous and other-worldly life found in all five deep ocean trenches, including several new species that have posed as of yet unanswered questions about survival and migration from ocean to ocean. Then there are the newly discovered sea mounts that cause tsunamis when they are broken by shifting subduction plates and jammed back into the earth crust, something that can now be studied to predict future disasters. Filled with high drama, adventure and the thrill of discovery, Expedition Deep Ocean celebrates courage and ingenuity and reveals the majesty and meaning of the deep ocean.

The doctrine of intelligent design is often the subject of acrimonious debate. Seeking God in Science cuts through the rhetoric that distorts the debates between religious and secular camps. Bradley Monton, a philosopher of science and an atheist, carefully considers the arguments for intelligent design and argues that intelligent design deserves serious consideration as a scientific theory. Monton also gives a lucid account of the debate surrounding the inclusion of intelligent design in public schools and presents reason why students’ science education could benefit from a careful consideration of the arguments for and against it.

A modern spiritual classic on the perfection of the soul by a renowned writer from the Islamic tradition.

Divinely Touched is a story of personal transformation. It chronicles Mary’s spiritual awakening, how she was divinely saved, led, and transformed. From the depths of depression, from battles with physical ailments for which the medical profession had no explanations, from being led into worlds she never knew existed, she survived being taken to the underworld. She was guided and healed by light workers, shamans, and avatars from this world and the spirit dimension and led on a journey of personal, physical, mental, and spiritual healing. Mary’s experience, like that of a caterpillar when transformed into a beautiful butterfly, is one that will inspire, enlighten, and transform your life as well. Dr. Dave uses science, research, and “knowledge of the ages” to explain what Mary experienced and open worlds to the reader that they may never have imagined. Divinely Touched: Transform Your Life can, in fact, do just that. “With painstaking detail, Mary describes her descent into darkness and her triumphant return. Like Margaret Starbird, in The Goddess in the Gospels, who also has a spiritual awakening that took her into the realms of psychosis, Mary describes a similar personal descent into darkness before bursting forth into spiritual awareness. Inside you will find a compelling story that may help you or someone you love.” —Maureen St. Germain, author of Beyond the Flower of Life & You Are the Genie in the Bottle “The world is waiting for this powerful story of good vs. evil. Mary’s story is amazing, compelling, eye-opening, and courageous. Her faith has carried her through the darkness into the light. She is God’s instrument and truly a living expression of divine light flowing forth into the world. Divinely Touched is a must-read, and you won’t want to put it down. It will blow your mind!” —Pat Hastings, Author of Simply a Woman of Faith: How to Live in Spiritual Power and Transform Your Life “Mary’s amazing story will capture your interest and touch your heart. You will be inspired to move forward on your own journey of awakening.” —Andrew Oser, author of How Alternation Can Change Your Life; Finding the Rhythms of Health and Happiness “Divinely Touched is a wonderful book that documents an impassioned and heartfelt account of the pitfalls and triumphs of personal awakening.” —Dr. Michael Sharp, author of The Great Awakening, The Book of Light, The Book of Love, The Dossier of Ascension

Examines how the business of organ harvesting further complicates the process of death declaration and evaluates how death has been determined throughout history.

"While exploring the evidence for an afterlife, I witnessed some unbelievable things that are not supposed to be possible in our material world. Yet they were unavoidably and undeniably real. Despite my initial doubt, I came to realize that there are still aspects of Nature which are neither understood or accepted, even though their reality has profound implications for understanding the true breadth of the human psyche and its possible continuity after death." So begins Leslie Kean's impeccably researched, page-turning investigation, revealing stunning and wide-ranging evidence suggesting that consciousness survives death. In her groundbreaking second book, she continues her examination of unexplained phenomena that began with her provocative New York Times bestseller UFOs: Generals, Pilots, and Government Officials Go on the Record. Kean explores the most compelling case studies of young children reporting verifiable details from past lives, contemporary mediums who seem to defy the boundaries of the brain and of the physical world, apparitions providing information about their lives on earth, and people who die and then come back to report journeys into another dimension. Based on facts and scientific studies, Surviving Death includes fascinating chapters by medical doctors, psychiatrists, and PhDs from four countries. As a seasoned journalist whose work transcends belief systems and ideology, Kean enriches the narrative by including her own unexpected, confounding experiences encountered while she probed the question concerning all of us: Do we survive death?

A doctor recounts patient stories from her five-year clinical study of Near-Death Experiences, revealing how this phenomenon is more powerful than we realize Dr. Penny Sartori is a registered nurse who began researching Near-Death Experiences (NDEs) in 1995 after one of her long-term intensive care patients begged her to let him die in peace. Inspired by this encounter, she went on to research NDEs in a PhD program, where she learned profound spiritual lessons and made startling discoveries that she now shares in The Wisdom of Near-Death Experiences. During her academic work, Dr. Sartori studied three samples of ICU patients during a five-year period. Here, she recounts the eye-opening stories of those patients who experienced NDEs and out-of-body experiences (OBEs). In one group, as many as 18% of patients experienced an NDE—though Patient #10 stood out among the others. After being unresponsive, he awoke to report he had experienced an OBE. He was able to describe what happened in the hospital room while he was unconscious and claimed he met not only his deceased father but a Jesus-like figure. Most shocking of all, he had regained the use of his hand—which had been paralyzed since birth. When talking about the biggest takeaways from her research, Dr. Sartori shares how her findings have made her question the common belief that the brain gives rise to consciousness. Most importantly, she has gained a deeper appreciation for death—an experience she now views with less fear and anxiety. In addition to detailing dozens of case studies, The Wisdom of Near-Death Experiences also discusses childhood NDEs, the differences in NDEs among different cultures, and the after-effects of NDEs.
