The book presents 👀 based on the most recent research and development results worldwide - the perspectives of new propulsion concepts such as electric cars with batteries and fuel cells, and furthermore plug-in hybrids with conventional and alternative fuels. The propulsion concepts are evaluated based on specific power, torque characteristic, acceleration behaviour, specific fuel consumption and pollutant emissions. The alternative fuels are discussed in terms of availability, production, technical complexity of the storage on board, costs, safety and infrastructure. The book presents summarized data about vehicles with electric and hybrid propulsion. The propulsion of future cars will be marked by diversity 👀 from compact electric city cars and range extender vehicles for suburban and rural areas up to hybrid or plug-in SUV 👀, Pick up 👀 and luxury class automobiles.

Today, bread supplies over half of the caloric intake of the world's population including a high proportion of the intake of Vitamins B and E. Bread therefore is a major food of the world. Bread was the main staples of the ancient Egyptian diet. Around 7,000 BC humans (probably Egyptians) somehow learned to grind grains in water and heat the mix on hot stoves to make unleavened bread. The art of bread making goes back to very early stages of different historical eras. Bread is an important part of the human diet, but for many people, it is much more than just providing macro- and micro-nutrients. Bread with their different types is influenced mainly by the nature of substrate and microorganisms involved in the fermentation. The components of bread depend on the type of bread and on practice and regulations operating in a country. They include basic components and other components (fortifying or enriching ingredients, emulsifiers, anti-fungal agents, anti-oxidants, enzymes and favoring agents, etc.). Bread and its Fortification for Nutrition and Health Benefits provides updated information in the area of bread and its fortification for health benefits. It serves as a useful reference book with recent advances in the areas of fermentation technology, bread microbiology, bread biotechnology, and bread biochemistry, which is related strongly to human health.

Bluestocking Feminism and British-German Cultural Transfer, 1750/1837 examines the processes of cultural transfer between Britain and Germany during the Personal Union, the period from 1714 to 1837 when the kings of England were simultaneously Electors of Hanover. While scholars have generally focused on the political and diplomatic implications of the Personal Union, Alessa Johns offers a new perspective by tracing sociocultural repercussions and investigating how, in the period of the American and French Revolutions, Britain and Germany generated distinct discourses of liberty even though they were nonrevolutionary countries. British and German reformists/feminists in particular used the period's expanded pathways of cultural transfer to generate new discourses as well as to articulate new views of what personal freedom, national character, and international interaction might be. Johns traces four pivotal moments of cultural exchange: the expansion of the book trade, the rage for translation, the effect of revolution on intra-European travel and travel writing, and the impact of transatlantic journeys on visions of reform. Johns reveals the way in which what she terms "bluestocking transnationalism" spawned discourses of liberty and attempts at sociocultural reform during this period of enormous economic development, revolution, and war.

Maintaining that it is impossible to understand the work of a philosopher without understanding the previous history of thought and the contemporaneous developments, this book, originally published in 1932, is an in-depth study of Descartes' philosophy with a strong emphasis on the historical approach. It covers Descartes' early life and education, before continuing to discuss his method of doubt, the existence of God, the scientific interpretation of nature, the unity of knowledge, the attributes of God and free-will.

This book offers a new type of working tool for Cartesian studies. It presents the literature of the last 160 years in alphabetical order (Part Two), combined with a systematic analytical survey (Part One) and a detailed topical index to the whole (Part Three). This organization makes it possible to turn bibliogra phy from a repository of references into a workshop of research. The system atic survey of Part One and the topical index of Part Three, together, offer a mise au point of Descartes studies over their full historical and topical range. The results have often been surprising and illuminating to the author, and if his experience is any guide, the reader, too, will begin to wonder about certain seemingly well-settled points, or marvel at the Protean shapes which our elusive philosopher assumes when mighty commentators force him to reveal his true nature. A work which has been in the making for fifteen years must show the traces of expansion in scope, and changes in evaluation. Bibliographia cartesiana amends my Descartes chapter in A Critical Bibliography of French Literature, v. 3, 1961 (see no. 19a), and supersedes an earlier version of Parts One and Two, published in 1959 under the main title Descartes and his Philosophy, v. 1 (set: no. 18a). Part I (Introduction to Descartes Studies) divides the field into eleven broad areas.
