~~Fitness for purpose. As Karen Gidwani explains fitness for purpose is a phrase often used in everyday language in relation to a service or a product that is not working as expected or desired. In construction contracts, however, the concept of fitness for purpose has its own body of case law and analysis, and the effect of including a fitness for purpose clause in a construction contract can be draconian.~~

As a society we have never had so much advantage and yet been so disadvantaged by this very same society which we have built for ourselves, by ignoring our basic needs when it comes to sleep, nutrition, movement, relaxation, relationships and purpose in life. We face a rising tide of physical health problems, such as obesity and diabetes, and mental health issues such as loneliness and depression. Our medical model is a broken, disease-based one which is not fit to meet our needs, particularly when it comes to preventing health and wellbeing problems. Just as secular society is often guilty of dualism when it comes to wellbeing, focusing on the physical but ignoring the spiritual, the faith community may make the same mistake in reverse, focusing on the spiritual whilst ignoring the physical. We need to combine all these different aspects to enjoy true wellbeing and a satisfying life. The book explores what it means to be fit for purpose in life: physically, mentally and spiritually. It describes the problems we face, both individually and as communities, and succinctly summarizes the evidence for the key factors that determine our wellbeing. It lays down a challenge to avoid treating physical, mental and spiritual wellbeing as separate. Using knowledge and experience of the worlds of medicine, behavioral change and Christian faith, Dr. Pile presents real life case studies and provides

practical recommendations for making changes whether for ourselves, our faith community or wider society.

Principles and Practices of Method Validation is an overview of the most recent approaches used for method validation in cases when a large number of analytes are determined from a single aliquot and where a large number of samples are to be analysed. Much of the content relates to the validation of new methods for pesticide residue analysis in foodstuffs and water but the principles can be applied to other similar fields of analysis. Different chromatographic methods are discussed, including estimation of various effects, eg. matrix-induced effects and the influence of the equipment set-up. The methods used for routine purposes and the validation of analytical data in the research and development environment are documented. The legislation covering the EU-Guidance on residue analytical methods, an extensive review of the existing in-house method validation documentation and guidelines for single-laboratory validation of analytical methods for trace-level concentrations of organic chemicals are also included. With contributions from experts in the field, any practising analyst dealing with method validation will find the examples presented in this book a useful source of technical information.
