| In Aztec mythology, the fertility goddess Tonacacihuatl – meaning "Lady of Our Food" or "Lady of Our Flesh" – was worshipped for peopling the earth and making it fruitful. The husking of the corn was perceived by the Aztec as the same act as the tearing out of a sacrificial victim ' s heart – both using the obsidian blade that was Tonacacihuatl ' s symbol. |

| Why are living things alive? As a theoretical biologist, Robert Rosen saw this as the most fundamental of all questions-and yet it had never been answered satisfactorily by science. The answers to this question would allow humanity to make an enormous leap forward in our understanding of the principles at work in our world. For centuries, it was believed that the only scientific approach to the question "What is life?" must proceed from the Cartesian metaphor (organism as machine). Classical approaches in science, which also borrow heavily from Newtonian mechanics, are based on a process called "reductionism." The thinking was that we can better learn about an intricate, complicated system (like an organism) if we take it apart, study the components, and then reconstruct the system-therby gaining an understanding of the whole. However, Rosen argues that reductionism does not work in biology and ignores the complexity of organisms. Life Itself, a landmark work, represents the scientific and intellectual journey that led Rosen to question reductionism and develop new scientific approaches to understanding the nature of life. Ultimately, Rosen proposes an answer to the original question about the causal basis of life in organisms. He asserts that renouncing the mechanistic and reductionistic paradigm does not mean abandoning science. Instead, Rosen offers an alternate paradigm for science that takes into account the relational impacts of organization in natural systems and is based on organized matter rather than on particulate matter alone. Central to Rosen's work is the idea of a "complex system," defined as any system that cannot be fully understood by reducing it to its parts. In this sense, complexity refers to the causal impact of organization on the system as a whole. Since both the atom and the organism can be seen to fit that description, Rosen asserts that complex organization is a general feature not just of the biosphere on Earth-but of the universe itself. |

| Winner of a 2006 Logos Book Award! "They were amazed at his teaching." "They fell down before him." "He touched her hand." "They left their nets." Often when we read the New Testament accounts of Jesus' life, we focus on his teachings and stories. But Don Everts draws our attention to the seemingly insignificant "stage directions" of the Gospels that describe the activity surrounding him. Everts writes, "It's significant that in the Gospels we don't just have a bullet list of quotes from Jesus." We also have observations of what he did and how people responded to him. By examining these simple phrases and casual comments, Everts assembles a startlingly fresh portrait of who Jesus was and is. While no one has seen the invisible God, when we look at the life of Jesus, we discover what his early followers discovered—that Jesus is God in the flesh. |

| First published in 1997, this is the comprehensive and irrefutable proof of the flesh-and-blood gods who created us genetically in their own image. This interventionist solution identifies them as the builders of the Pyramids, Sphinx and other ancient sites. Up-to-date evidence is that the gods were real and came from within the Solar System. |

| The so-called extra Calvinisticum-the doctrine that the incarnate Son of God continued to exist beyond the flesh-was not invented by John Calvin or Reformed theologians. If this is true, as is almost universally acknowledged today, then why do scholars continue to fixate almost exclusively on Calvin when they discuss this doctrine? The answer to the "why" of this scholarly trend, however, is not as important as correcting the trend. This volume expands our vision of the historical functions and christological significance of this doctrine by expounding its uses in Cyril of Alexandria, Thomas Aquinas, Zacharias Ursinus, and in theologians from the Reformation to the present. Despite its relative obscurity, the doctrine that came to be known as the "Calvinist extra" is a possession of the church catholic and a feature of Christology that ought to be carefully appropriated in contemporary reflection on the Incarnation. |

| Most theologians believe that in the human life of Jesus of Nazareth, we encounter God. Yet how the divine and human come together in the life of Jesus still remains a question needing exploring. The Council of Chalcedon sought to answer the question by speaking of one and the same Son, our Lord Jesus Christ, the same perfect in divinity and also perfect in humanity, the same truly God and truly a human being. But ever since Chalcedon, the theological conversation on Christology has implicitly put Christ's divinity and humanity in competition. While ancient (and not-so-ancient) Christologies from above focus on Christ's divinity at the expense of his humanity, modern Christologies from below subsume his divinity into his humanity. What is needed, says Ian A. McFarland, is a Chalcedonianism without reserve, which not only affirms the humanity and divinity of Christ but also treats them as equal in theological significance. To do so, he draws on the ancient christological language that points to Christ's nature, on the one hand, and his hypostasis, or personhood, on the other. And with this, McFarland begins one of the most creative and groundbreaking theological explorations into the mystery of the incarnation undertaken in recent memory. |
