Herpes Beginning Manual Guide - HUDAN

Genital herpes is caused by the herpes simplex virus (HSV). There are two types of HSV – type 1 and type 2, and both types can infect either the orolabial region or the anogenital region. Historically, oral herpes was mainly caused by HSV-1 and anogenital herpes was mainly caused by HSV-2 but that has changed over the last few decades.

Why don't babies come with a how to manual? " Wouldn't it be nice to have a pediatrician there with you so you could remember what was said in those well visits and to ask simple questions to? Finally a parenting book that is organized around your baby's well visits, isn't written like a text book and meant to calm you down rather than scare you about all the very rare possibilities. Dr. Cliff James is a board certified Pediatrician in private practice for the last 15 years. His goal was to write a book that could both inform and entertain a new parent. With the help of his own baby, Kaden, you get a look at parenting from a pediatrician point of view as well as the mind of a baby/toddler/evil genius. This book covers: \*Choosing a pediatrician \*Feeding your baby \*Pee, Poop, Puke and Snot \*Vaccines \*What happens in the hospital \*Chapters for each well visit \*Developmental milestones \*Illnesses \*Injuries This book is designed to bring a little lightheartedness to parenthood with cartoons, jokes, and plenty of Dr. James' own disaster stories as a parent. " To often we as pediatricians and parents spend too much time emphasizing how much work it is to be a parent and lose sight of the fact children are hilarious and a great source of joy. "

Much has been said about managing herpesvirus infections since the discovery of acyclovir more than 15 years ago. This book aims to bring practical advice to the key clinician who is faced with managing these infections. It addresses questions like: there are antiviral

## Online Library Herpes Beginning Manual Guide

treatments for many of these infections, but who should be getting these drugs and who should not? What are the advantages, if any, of the new drugs over the old ones? Which patients should be targeted for intervention? What is the clinical reality of antiviral resistance? Where do the up and coming vaccines fit into the picture? When should therapy be discontinued or reassessed? How are patients presenting other than chorioretinitis in AIDS or pneumonitis in transplantation? The contributing clinician scientists deal with these questions and many more. Listed by Biological Abstracts/RRM, BIOSIS, volume 48, issue 8, August 1995 Covered by Current Contents, Life Sciences (ISI), volume 39, no. 2, Januari 1996, p. 12
