Before the 20th century, the term 'historical geography' was used to describe at least three distinct intellectual endeavours: the recreation of the geographies described in the Bible and in 'classical' Greek and Roman narratives; the 'geography behind history' as revealed by the changing frontiers and borders of states and empires; and the history of geographical exploration and discovery.

Hailed as a breakthrough in the understanding of human evolution, The History and Geography of Human Genes offers the first full-scale reconstruction of where human populations originated and the paths by which they spread throughout the world. By mapping the worldwide geographic distribution of genes for over 110 traits in over 1800 primarily aboriginal populations, the authors charted migrations and devised a clock by which to date evolutionary history.

Difference between history and geography - Difference All

Historical geography, geographic study of a place or region at a specific time or period in the past, or the study of geographic change in a place or region over a period of time. The writings of Herodotus in the 5th century bce, particularly his discussion of how the Nile River delta formed, probably provide the earliest example of what would be called historical geography today.

Biblical Geography is important because God is in history, and history is forever connected to the geography of the land from which the events in history occurred. All the events in the Bible happened in time, and happened in a certain place, on a mountain or near a river, on a boat in a lake, in a valley, or on the seacoast.

Biblical Geography (Bible History Online)

Historical geography is the branch of geography that studies the ways in which geographic phenomena have changed over time. It is a synthesizing discipline which shares both topical and methodological similarities with history, anthropology, ecology, geology, environmental studies, literary studies, and other fields.

A brief history and geography of China from the most ancient dynasty to 1900. Note that the borders of what was designated as "China" varied over the centuries, though the fertile area along the Yellow River (Huang He) in Northern China was always central. From the earliest recorded times, the Chinese have produced beautiful bronzes, pottery, jade and silk - unique arts with exquisite ...

The authors in this volume believe that long-term, profound, and sometimes tumultuous changes in the last five hundred years of the history of China have been no less geographical than social, political, or economic. From the dialectics of local-empire relations to the imperial state's persistent array of projects for absorbing and transforming ethnic regions on the margins of empire; from the tripling of imperial territories in the Qing to the disputes over the identity of the former "outer zones" in the early Republican era; and from the universalistic imagination of "all-under-heaven" to the fraught processes of re-drawing a new set of nation-state boundaries in the twentieth century, the study of the dynamics of geography, broadly conceived, promises to provide insight into the contested development of the geographical entity which we, today, call 'China.'

A study of the school textbook grounded in historical and comparative perspectives. The approach is broadly chronological, revealing changes in the theory and practice of textbook production and use. The book focuses largely on three associated subjects - geography, history and social studies.

'Human Geography' examines the major trends, debates, research and conceptual evolution of human geography during the twentieth century. Considering each of the subject's primary subfields in turn, it addresses developments in both continental European and Anglo-American geography, providing a cutting-edge evaluation of each. Written clearly and accessibly by leading researchers, the book combines historical astuteness with personal insights and draws on a range of theoretical positions. A central theme of the book is the relative decline of the traditional subdisciplines towards the end of the twentieth century, and the continuing movement towards interdisciplinarity in which the various strands of human geography are seen as inextricably linked. This stimulating and exciting new book provides a unique insight into the study of geography during the twentieth century, and is essential reading for anyone studying the history and philosophy of the subject.

Excerpt from History of Geography This is not a history of geographical exploration, though the leading episodes in the advance of our knowledge of the face of the Earth are necessarily referred to in tracing the evolution of geography as a department of science. That is the object of this volume as one of a series dealing succinctly with the history of the various sciences. We are not concerned to discuss whether Geography is entitled to be considered as a science or not. It is hoped that in the attempt to tell the story of its evolution up to the present day it will be evident that it is as amenable to scientific methods as any other department of human knowledge, and that it performs important functions which are untouched by any other lines of research. I use the first person plural because I am greatly indebted to Mr. O. J. R. Howarth in coming to my help after I had accumulated much of the material, but was seriously delayed owing to a great increase in my official duties. The greater share of whatever merits the book may possess ought to be awarded to Mr.

Howarth. I am indebted to Mr. E. A. Reeves's interesting little book on Maps and Map-making for many of the illustrations. First published in 1936, *The Geographical History of America* compiles prose pieces, dialogues, philosophical meditations, and playlets by one of the century's most influential writers. In this work, Stein sets forth her view of the human mind: what it is, how it works, and how it is different from - and more interesting than - human nature.

Now in a fourth edition, this standard student reference has been totally revised and updated. It remains the definitive introduction to the history, philosophy, and methodology of human geography; now including a detailed explanation of key ideas in human geography's post-modernist and post-structuralist 'turns'. The book is organized into six sections: *What is Geography?*: an introduction to the discipline, and a discussion of its organization and basic research approaches, informed by the question 'what difference does it make to think geographically?' *Foundations of Geography*: an examination of geography from Antiquity to the 1950s, with a special focus on human/environment relation. *Geography 1950-1980*: a critical review of the development of geography as a spatial science. *Paradigms and Revolutions*: an analysis of paradigm shifts in geography, introducing students to key debates in the philosophy of science. *Positivism and its Critics*: a detailed discussion of positivism, critical theory, humanistic geography, behavioural geography, and structuralism. *New Trends and Ideas* developing critical responses: structuration theory, realism, post-structuralism, post-modernism, feminism and actor-network theory. This text explores complex ideas in an intelligible and accessible style. Illustrated throughout with research examples and explanations in text boxes, questions for discussion at the end of each chapter and a concept glossary, this is the essential student companion to the discipline.

Volume one examines how an immense diversity of ethnic and religious groups ultimately created a set of distinct regional societies. Volume two emphasizes the flux, uncertainty, and unpredictability of the expansion into continental America, showing how a multitude of individuals confronted complex and problematic issues.

The period from the fifth century to the eighth century witnessed massive political, social and religious change in Europe. Geographical and historical thought, long rooted to Roman ideologies, had to adopt the new perspectives of late antiquity. In the light of expanding Christianity and the evolution of successor kingdoms in the West, new historical discourses emerged which were seminal in the development of medieval historiography. Taking their lead from Orosius in the early fifth century, Latin historians turned increasingly to geographical description, as well as historical narrative, to examine the world around them. This book explores the interdependence of geographical and historical modes of expression in four of the most important writers of the period: Orosius, Jordanes, Isidore of Seville and the Venerable Bede. It offers important readings of each by arguing that the long geographical passages with which they were introduced were central to their authors' historical assumptions and arguments.
