Blockchain is a disruptive technology potentially impacting how economic transactions are recorded, stored, and verified. Despite such ramifications, there is a lack of literature discussing this from the accountant's perspective. Through real-world cases this book distills an abstract technology to relatable experiences for business professionals.

This easy-to-consult guide examines the most advanced techniques in the radiological evaluation of the disc and degenerative disc disease, using conventional, functional, dynamic and advanced imaging. It provides clear information on a range of CT, X-ray, and MRI guided techniques, presents all disc treatments in connection with symptomatic disc herniations, evaluates conservative, chemical (ESI, steroid, Ozone, ethanol gel injections) and physical treatments (coblation, laser, decompressors, endoscopy), and assesses the possibility of repairing and/or regenerating the disc in the context of reversible disc degeneration. Like other books in the Springer series New Procedures in Spinal Interventional Neuroradiology, this practice-oriented volume will fill a significant gap in the literature and meet the need expressed by many specialists (interventional neuroradiologists and radiologists, neurosurgeons, and orthopedists) for a topical and handy guide that specifically illustrates the currently available materials and methods.

What makes you passionate about working with SQL Server? What lessons have you learned, perhaps the hard way, on how to get the best performance and scalability out of your SQL Server databases? We challenged a group of talented, up-and-coming 'new voices' in SQL Server to share their passion and knowledge with the Community. A DBA's core responsibilities are constant. A DBA must maintain and enforce security mechanisms on the data, prepare effectively for disaster recovery, ensure the performance and availability of all the databases in their care. As such, we have chapters providing tips on how to get the most out of features such as data compression, backup verification, performance tuning with traces and extended events, auditing, SSIS, and more. Side by side with these, we have chapters on the importance to a DBA of communicating clearly with their co-workers and business leaders, presenting data as useful information that the business can use to make decisions, adopting a more Agile approach to their work, and sound project management skills. The resulting book, Tribal SQL, is a reflection of how a DBA's core and long-standing responsibilities sit alongside new thinking and fresh ideas about where the DBA role is going, and what it means to be a DBA in today's businesses.

In Mordin On Time, Nick Mordin sets out his method for answering the most fundamental question facing punters in any race, namely: which is the fastest horse? He was timing the sections of races with a stop watch, estimating wind strength and direction, adjusting for movements of running rails, using projected times and calculating average times years before the best-selling American books on speed rating were published. This new edition incorporates much new material, including standard times for all Irish racecourses (plus the major French ones). Mordin On Time enables the reader to construct their own speed ratings wherever they live.

This thesis introduces Tadao Ando, a well-known Japanese architect, who is currently working on an emerging concept in the discourse of architecture, and is opening an approach of high sensibility (sensual, reflective, flexible, and complex, sensitively matching with every moment of life) and conceptualism (rational, logically approaching truth) that is widely considered one of the most important ways of thinking and designing architecture. In the introduction chapter, Tadao Ando's is introduced as a master of architecture and as a critic. Secondly, his goals, objectives, concepts and strategies are outlined. These aspects are grouped and developed into major themes. Those themes will later be interpreted in Chapter Four. In the second chapter of the thesis, the architecture of Tadao Ando is examined more closely, through critics' studies and his writings. This part aims to open further discussions on the most substantial and important grounds and sources of his architecture, which are interpreted in further detail in Chapter Four: the key themes of his works and theories. Being aware that Ando's architecture cannot be understood without grasping "Japaneseness", or the historical cultural and regional contexts of Japan, the third chapter will be devoted to briefly introducing the origins, philosophy, traditions, and culture of the country, as well as major points of new waves of Japanese architecture, both of which tangibly and intangibly serve as the foundation for Ando's architectural themes: nature, shintai, and geometry as both abstract construct and substance. This chapter is essential for understanding the foundation and context of Ando's thoughts that always determine his architecture. Chapter Four is the key part of the thesis. It focuses on two aspects: Ando's philosophically-based theoretical concepts, and his major themes which have been introduced in the previous sections. This chapter provides a general and coherent understanding of his work. The concluding chapter summarizes the crucial points from among Ando's visions, moving from origins and philosophical grounds through concepts, strategies and theories, to the unique solutions which he advances for problems of the age. Thematically, Tadao Ando's works may be shown to reveal: Dialogue with Nature and Tradition (cosmologies, culture); Shintai and Space (mutual independence and penetration); and Geometry (spatial compositions, minimalist form, material and texture). Among these three overriding themes, there are many interrelated sub-themes are also examined. Download 1st chapter & ByteSizeSystems Reader FREE - and buy ByteSize b-book for \$5.00.
