(enlivened with more than seventy original illustrations and photographs), Steve Brusatte, a young American paleontologist who has emerged as one of the foremost stars of the field—naming fifteen new species and leading groundbreaking scientific studies and fieldwork—masterfully tells the complete, surprising, and new history of the dinosaurs, drawing on cutting-edge science to dramatically bring to life their lost world and illuminate their enigmatic origins, spectacular flourishing, astonishing diversity, cataclysmic extinction, and startling living legacy. Captivating and revelatory, *The Rise and Fall of the Dinosaurs* is a book for the ages. Brusatte traces the evolution of dinosaurs from their inauspicious start as small shadow dwellers—themselves the beneficiaries of a mass extinction caused by volcanic eruptions at the beginning of the Triassic period—into the dominant array of species every wide-eyed child memorizes today, *T. rex*, Triceratops, Brontosaurus, and more. This gifted scientist and writer re-creates the dinosaurs' peak during the Jurassic and Cretaceous, when thousands of species thrived, and winged and feathered dinosaurs, the prehistoric ancestors of modern birds, emerged. The story continues to the end of the Cretaceous period, when a giant asteroid or comet struck the planet and nearly every dinosaur species (but not all) died out, in the most extraordinary extinction event in earth's history, one full of lessons for today as we confront a "sixth extinction." Brusatte also recalls compelling stories from his globe-trotting expeditions during one of the most exciting eras in dinosaur research—which he calls "a new golden age of discovery"—and offers thrilling accounts of some of the remarkable findings he and his colleagues have made, including primitive human-sized tyrannosaurs; monstrous carnivores even larger than *T. rex*; and paradigm-shifting feathered raptors from China. An electrifying scientific history that unearths the dinosaurs' epic saga, *The Rise and Fall of the Dinosaurs* will be a definitive and treasured account for decades to come. Includes 75 images, world maps of the prehistoric earth, and a dinosaur family tree.

Illustrated with forty-eight color plates and scores of black-and-white pictures, an entertaining study examines the enduring appeal of dinosaurs to the human imagination, the many different images of dinosaurs in popular culture, and their symbolic meaning and uses. UP.

Imagine if dinosaurs were alive today . . . How would they cope? Join Triceratops as he goes to the zoo, bakes a cake, and joins a football team. Along the way discover just how BIG and bulky he really was! There's a Triceratops in the Tree House gives young readers a simple introduction to four dinosaur species: Tyrannosaurus Rex, Diplodocus, Stegosaurus, and Triceratops. By imagining dinosaurs in modern-day scenarios, readers learn about their size, diet, and other features. For example, a Stegosaurus weighed as much as three cars -- so just imagine how it would play on a seesaw! The engaging question-and-answer format keeps young readers entertained and helps them to understand and retain dinosaur facts.
