#1 New York Times bestselling author and master of horror Stephen King teams up with Bev Vincent of Cemetery Dance to present a terrifying collection of sixteen short stories (and one poem) that tap into one of King ' s greatest fears—air travel—featuring brand-new stories by King and Joe Hill. " an expertly compiled collection of tales that entertain and scare " (Booklist). Stephen King hates to fly, and he and co-editor Bev Vincent would like to share their fear of flying with you. Welcome to Flight or Fright, an anthology about all the things that can go horribly wrong when you ' re suspended six miles in the air, hurtling through space at more than 500 mph, and sealed up in a metal tube (like—gulp!—a coffin) with hundreds of strangers. Here are all the ways your trip into the friendly skies can turn into a nightmare, including some we ' ll bet you ' ve never thought of before... but now you will the next time you walk down the jetway and place your fate in the hands of a total stranger. Featuring brand-new " standouts " (Publishers Weekly) by Joe Hill and Stephen King, as well as fourteen classic tales and one poem from the likes of Richard Matheson, Ray Bradbury, Roald Dahl, Dan Simmons, Sir Arthur Conan Doyle, and many others, Flight or Fright is, as King says, " ideal airplane reading, especially on stormy descents...Even if you are safe on the ground, you might want to buckle up nice and tight. " Each story is introduced by Stephen King and all will have you thinking twice about how you want to reach your final destination.

For this set of lectures we assumed that the reader has a reasonable back ground in physics and some knowledge of general relativity, the modern theory of gravity in macrophysics, and cosmology. Computer methods are present ed by leading experts in the three main domains: in numerics, in computer algebra, and in visualization. The idea was that each of these subdisciplines is introduced by an extended set of main lectures and that each is conceived as being of comparable 'importance. Therefore we believe that the book represents a good introduction into scientific 1 computing for any student who wants to specialize in relativity, gravitation, and/or astrophysics. We took great care to select lecturers who teach in a comprehensible way and who are, at the same time, at the research front of their respective field. In numerics we had the privilege of having a lecturer from the National Center for Supercomputing Applications (NCSA, Champaign, IL, USA) and some from other leading institutions of the world; visualization was taught by a visualization expert from Boeing; and in com puter algebra we took recourse to practitioners of different computer algebra systems as applied to classical general relativity up to quantum gravity and differential geometry.

For this revision of their bestselling junior- and senior-level text, Guru and Hiziroglu have incorporated eleven years of cutting-edge developments in the field since Electric Machinery and Transformers was first published. Completely re-written, the new Second Edition also incorporatessuggestions from students and instructors who have used the First Edition, making it the best text available for junior- and senior-level courses in electric machines. The new edition features a wealth of new and improved problems and examples, designed to complement the authors' overall goal ofencouraging intuitive reasoning rather than rote memorization of material. Chapter 3, which presents the conversion of energy, now includes: analysis of magnetically coupled coils, induced emf in a coil rotating in a uniform magnetic field, induced emf in a coil rotating in a time-varying magneticfield, and the concept of the revolving field. All problems and examples have been rigorously tested using Mathcad.

A guide to the operating system covers Red Hat Linux, Caldera, and SuSE and offers advice on installation, configuration, administration, networking, and troubleshooting

00 Throughout this century the visual avant-garde has met the public through provocative exhibitions, where partisans confronted anger and derision in reaction to the new art. Bruce Altshuler provides an account of more than twenty key exhibitions in Europe, America, and Asia from 1905 through the 60s, presenting a new perspective on advanced art through a focus on critical moments of interaction among artists, dealers, collectors, critics and public. An investigation into how schools can influence the developing values of young people is given in this book. The authors first look, from the perspective of educationalists and policy makers, at values within contemporary education; in particular, moral, spiritual, democratic and environmental values together with arts and health education. Secondly, they focus on the values of pupils and schools, examining school aims and mission statements, the formal curriculum, school ethos and assessment of children's development.; Insights are provided with guidance on how values may be most effectively incorporated into the activities of the schools. This book is intended to be of use as a practical and informative guide to all those involved in primary and secondary education and those interested in values education generally.

To escape a lifetime of poverty, mercenary Sir Benedict Palmer agrees to one final, lucrative job: help King Henry II ' s knights seize the traitor Archbishop Thomas Becket at Canterbury Cathedral. But what begins as a clandestine arrest ends in cold-blooded murder. And when Fitzurse, the knights' ringleader, kidnaps Theodosia, a beautiful young nun who witnessed the crime, Palmer can sit silently by no longer. For not only is Theodosia ' s virtue at stake, so too is the secret she unknowingly carries—a secret he knows Fitzurse will torture out of her. Now Palmer and Theodosia are on the run, strangers from different worlds forced to rely only on each other as they race to uncover the hidden motive behind Becket ' s grisly murder—and the shocking truth that could destroy a kingdom.

A compilation of hundreds of quotations by the controversial conservative spokesperson offers observations on Democrats, dating, environmentalism, religion, evolution, Reagan, terrorism, television, and hundreds of other topics.
