Foods and Drinks for 6 to 24 Month Olds When your child is about 6 months old, you can start introducing him or her to foods and drinks other than breast milk and infant formula. The foods and drinks you feed your child are sometimes called complementary foods.

~~Foods and Drinks for 6 to 24 Month Olds | Nutrition | CDC~~

Most newborns need eight to 12 feedings a day — about one feeding every two to three hours. Look for early signs of readiness to feed, such as moving the hands to the mouth, sucking on fists and fingers, and lip smacking. Fussing and crying are later cues. The sooner you begin each feeding, the less likely you'll need to soothe a frantic baby.

~~Feeding your newborn: Tips for new parents — Mayo Clinic~~

Infant and young child feeding is a key area to improve child survival and promote healthy growth and development. The first 2 years of a child's life are particularly important, as optimal nutrition during this period lowers morbidity and mortality, reduces the risk of chronic disease, and fosters better development overall.

~~Infant and young child feeding — World Health Organization~~

Breastfeeding is best for babies. Infant formula is suitable from birth when babies are not breastfed. Follow-on milk is only for babies over 6 months, as part of a mixed diet and should not be used as a breastmilk substitute before 6 months.

A comprehensive manual for feeding babies and toddlers during the first years of life.

Abstract: Nutrition information and feeding guidelines are presented as a handy reference for parents of infants and toddlers. Breastfeeding is discussed, including maternal nutrition requirements, feeding schedules, and the use of non-food substances such as medicines or alcohol. Various commercial infant formulas are described as well as equipment, preparation, storage, and feeding techniques. The introduction of solid foods, beginning with cereals, is recommended at about age 5 months. Good nutrition and eating habits at this point in life are discussed. Other topics include making baby food at home, weaning the infant, nutritional content of various foods, and the toddler's food habits. Feeding during illness covers clear and soft diets, and how to feed during periods of fever, vomiting or diarrhea. (cj).

Recommendations for feeding infants and young children have changed substantially over time owing to scientific advances, cultural influences, societal trends, and other factors. At the same time, stronger approaches to reviewing and synthesizing scientific evidence have evolved, such that there are now established protocols for developing evidence-based health recommendations. However, not all authoritative bodies have used such approaches for developing infant feeding guidance, and for many feeding questions there is little or no sound evidence available to guide best practices, despite the fact that research on infant and young child feeding has expanded in recent decades. Summarizing the current landscape of feeding recommendations for infants and young children can reveal the level of consistency of existing guidance, shed light on the types of evidence that underpin each recommendation, and provide insight into the feasibility of harmonizing guidelines. *Feeding Infants and Children from Birth to 24 Months* collects, compares, and summarizes existing recommendations on what and how to feed infants and young children from birth to 24 months of age. This report makes recommendations to stakeholders on strategies for communicating and disseminating feeding recommendations.
