This new edition of *Digital Preservation in Libraries, Archives, and Museums* is the most current, complete guide to digital preservation

available today. For administrators and practitioners alike, the information in this book is presented readably, focusing on management issues and best practices. Although this book addresses technology, it is not solely focused on technology. After all, technology changes and digital preservation is aimed for the long term. This is not a how-to book giving step-by-step processes for certain materials in a given kind of system. Instead, it addresses a broad group of resources that could be housed in any number of digital preservation

systems. Finally, this book is about “things (not technology; not how-to; not theory) I wish I knew before I got started.” Digital preservation is concerned with the life cycle of the digital object in a robust and all-inclusive way. Many Europeans and some North Americans may refer to digital curation to mean the same thing, taking digital preservation to be the very limited steps and processes needed to insure access over the long term. The authors take digital preservation in the broadest sense of the term: looking at all aspects of curating and preserving digital content for long

term access. The book is divided into four part:
1.Situating Digital Preservation, 2.Management Aspects, 3.Technology Aspects, and 4.Content-Related Aspects. Digital Preservation will answer questions that you might not have even known you had, leading to more successful digital preservation initiatives.

Artefacts, Archives, and Documentation in the Relational Museum provides the first interdisciplinary study of the digital documentation of artefacts and archives in contemporary museums, while also

exploring the implications of polyphonic, relational thinking on collections documentation. Drawing on case studies from Australia, the United Kingdom, and the United States, the book provides a critical examination of the history of collections management and documentation since the introduction of computers to museums in the 1960s, demonstrating how technology has contributed to the disconnection of distributed collections knowledge. Jones also highlights how separate documentation systems have developed, managed by distinct, increasingly professionalised staff,

impacting our ability to understand and use what we find in museums and their ever-expanding online collections. Exploring this legacy allows us to rethink current practice, focusing less on individual objects and more on the rich stories and interconnected resources that lie at the heart of the contemporary, plural, participatory 'relational museum.' Artefacts, Archives, and Documentation in the Relational Museum is essential reading for those who wish to better understand the institutional silos found in museums, and the changes required to make museum knowledge more

accessible. The book is a particularly important addition to the fields of museum studies, archival science, information management, and the history of cultural heritage technologies.

The New Art Museum Library addresses the issues facing today's art museum libraries through a series of scholarly essays written by top librarians in the field. In 2007, the publication, *Art Museum Libraries and Librarianship*, edited by Joan Benedetti, was the first to solely focus on the field of art museum librarianship. In the decade

since then, many changes have occurred in the field--both technological and ideological--prompting the need for a follow-up publication. In addition to representing current thinking and practice, this new publication also addresses the need to clearly articulate and define the art museum library's value within its institution. It documents the broad changes in the environment that art museum libraries now function within and to celebrate the many innovative initiatives that are flourishing in this new landscape. Librarians working in art museum face

unique challenges as museums redefine what object-based, visitor-centric learning looks like in the 21st century. These unique challenges mean that art museum libraries are developing new strategies and initiatives so that they can continue to thrive in this environment. The unique nature of these initiatives mean that they will be useful to librarians working in a wide range of special libraries, as well as more broadly in academic and public libraries. The New Art Museum Library is uniquely positioned to present new strategies and initiatives including
