Kakao merupakan salah satu komoditas penting di Indonesia. Besarnya minat masyarakat untuk mengembangkan tanaman kakao terlihat nyata dengan banyaknya permintaan benih kakao. Buku yang ditulis secara lengkap ini diharapkan dapat menjadi panduan dalam menjalankan usaha budi daya kakao. Di dalamnya dibahas tentang perkembangan produksi dan pasar, cara memilih lahan yang sesuai, pola tanam, persiapan lahan, pemupukan dan pengolahan tanah, serta pengendalian hama dan penyakit. -Agromedia-

Buku ini menyajikan beragam informasi tentang kapulaga secara komprehensif dari hasil kajian referensi maupun telaah hasil penelitian mulai dari pengenalan jenis dan pemanfaatannya; persyaratan lingkungan dan tempat tumbuh; teknik budidaya; pemanenan, pasca panen dan pemasaran; analisa usaha agroforestri; serta prospek pengembangannya di areal kelola Perhutanan Sosial dan pekarangan, sehingga dapat memberikan inspirasi dan motivasi dalam pengembangan dan pemanfaatan jenis multiguna yang bernilai ekonomis, tak terkecuali di masa pandemi Covid-19 ini. Buku ini tepat untuk dibaca oleh para pihak, baik pelaku usaha maupun masyarakat dalam kegiatan budidaya tanaman.

The book carries information on fundamentals of vegetables, fruits, ornamental plants, spices, medicinal and aromatic plants and post-harvest technology. There are 15 chapters elaborating horticultural crops, apomoxis, polyembryony, ideal soils, climate, water requirements, pests, diseases and nematode management, biological control of biotic stresses, biotechnology of spices and mechanization of orchards. Introductory chapter deals in nut shell all about the book. The most recent information is provided along with a detailed list of references for further reading. A separate chapter on 'Glossary of Horticultural Terms' adds much value to the book as a ready reckoner to understand key words generally referred to in the science of horticulture. Eight appendices are attached narrating released varieties/hybrids in horticultural crops, research infrastructure in horticulture in India and abroad together with important web sites in all aspects of horticulture.

The agricultural paradigm is already undergoing a shift in focus from food security towards nutritional quality. Horticultural crops besides improving biological productivity and nutritional standards also have enormous export potential. This group of crops comprising fruits, vegetables, root and tuber crops, plantation crops, medicinal and aromatic plants, spices and condiments and ornamental crops, would constitute core of any such agro-economic strategy. In addition to supplementing the economy and national food grid by providing fresh and processed fruits, vegetable, nuts etc., horticultural crops also help to promote diversification. Depletion of plant genetic resources in areas of diversity at a rapid pace is a matter of global concern. This book profiles all scientific management aspects of the horticultural crop genetic resources including their diversity, conservation and sustainable utilization. It also addresses vital concerns regarding management of horticultural crop genetic resources from diverse perspectives and provides recommendations for action in certain areas of research that must be pursued with intensity. The publication would serve as a valuable comprehensive scientific reference for breeders, researchers, teachers, students and policy makers in biology and agriculture.

Building on the extremely successful and popularRussell ' s Soil Conditions and Plant Growth,Wiley-Blackwell is pleased to publish this completely revised andupdated edition of the soil science classic. Covering all aspectsof the interactions between plant and soil, Peter Gregory andStephen Nortcliff, along with their team of internationally-knownand respected authors, provide essential reading for all studentsand professionals studying and working in agriculture and soilscience. Subject areas covered range from crop science and genetics; soilfertility and organic matter; nitrogen and phosphorus cycles andtheir management; properties and management of plant nutrients;water and the soil physical environment and its management; plantsand change processes in soils; management of the soil/plant system;and new challenges including food, energy and water security in achanging environment. Providing a very timely account on how better to understand andmanage the many interactions that occur between soils and plants,Soil Conditions and Plant Growth is sure to become the bookof choice - as a recommended text for students and as an invaluablereference for those working or entering into the industry. Aneessential purchase for all universities and research establishmentswhere agricultural, soil, and environmental sciences are studiedand taught.

Application of science and technology in the development of agricultural industries in Indonesia.

--- Hardcover edition contains COLOR IMAGES! --- I don't want to suppose. I want to know. -Julia Frances Morton Fruits of Warm Climates is the encyclopedia for those who want to know! In one definitive volume, Morton explores the world of tropical and subtropical fruit, providing information on the history of the plants, cultivation techniques, food and alternative uses, nutrition, varieties, and much more. Written in a professional yet accessible voice, Fruits of Warm Climates is a must-have for anyone interested in tropical horticulture. Valuable for researchers as well as home and commercial growers, Fruits of Warm Climates masterfully packages the essential information on familiar and not-so-familiar tropical fruit. With over 400 pages containing hundreds of images, the volume is overflowing with information on countless varieties of fruits. Years after its original publication, Fruits of Warm Climates remains a leading text on the subject and the pinnacle work of economic botanist Julia F. Morton. It is an important resource for every agricultural, research, and science library. Julia F. Morton was Research Professor of Biology and Director of the Morton Collectanea (a research and information center devoted to economic botany) at the University of Miami. She received a D. Sc. from Florida State University in 1973 and was elected Fellow of the Linnean Society of London in 1974. She has held numerous positions in the field including President of the Florida State Horticulture Society, a member of the Board of Trustees of Fairchild Tropical Garden, and served on the Board of Directors of the Florida National Parks and Monuments Association. She is the author of 10 books and co-author of 12 others.
