I am very pleased to have been asked by Rod Gerber to provide a preface to such a book. Not least because of the twenty-four chapters, eight are written by former students or colleagues with whom I have worked in the past and whom I still meet at conferences on geographical education. It is with a certain pride and joy that I note the progress which has been made in geographical education both in its day to day teaching and in research, in the twenty years following the end of my term of office as Chair of the Commission on Geographical Education of the International Geographical Union (CGEIUG). My successors, Joe Stoltman, Hartwig Haubrich, Rod Gerber and now Lea Houtsonen, have done much and are continuing to work hard, to foster the development of geographical education. This book is proof, if proof were needed, that the international collaboration in this field, is alive and well, with contributions coming from all the continents (except Antarctica!). It would be a moribund subject that remained unaffected in one way or another by developments on the 'great world stage', as Fairgrieve (1926) would have put it. And, as Rod Gerber shows, the issues of globalisation, of cultural encounters, of differing value systems, of new technologies, of variable economic development and of environmental quality, all feature as topics which influence and are influenced by, geographical education.

This exemplary Handbook provides readers with a novel synthesis of international research, evidence-based practice and personal reflections to offer an overview of the current state of knowledge in the field of teaching geography in higher education. Chapters cover the three key transitions - into, through, and out of higher education - to present a thorough analysis of the topic.

This book provides a collection of critical pieces that support the idea that good teaching and learning of geography in fieldwork and using technology should consider the dimensions of curriculum design, instructional design and resource provision, as well as assessment for such learning activities. Further, it clearly describes the thinking, experiences and critical comments concerning two broad areas of learning outside the traditional classroom - in the field and with technology.

Oxford International Primary Geography is a complete six year primary geography course that provides an engaging introduction to the subject. Using real life examples from around the globe, the course covers key aspects of both human and physical geography, from the basics of mapping to more complex topics such as the pros and cons of ecotourism and how to meet the resource needs of the world's growing population. Additional Workbooks provide students with the opportunity for further study in the classroom or at home, including suggested research topics and cross-curricular projects. For the teacher, the Teacher's Guide provides step-by-step guidance for each lesson, as well as background knowledge and geographical information for specialist and non-specialist teachers alike.

A subject-specific guide for international secondary teachers to supplement learning and provide resources for lesson planning. Approaches to learning and teaching Geography is the result of close collaboration between Cambridge University Press and Cambridge International Examinations. Considering the local and global contexts when planning and teaching an international syllabus, the title presents ideas for Geography with practical examples that help put theory into context. Teachers can download online tools for lesson planning from our website. This book is ideal support for those studying professional development qualifications or international PGCEs.

IN QUESTO NUMERO Sirpa Tani, National cases, international collaboration - an example from Finland Joop van der Schee, Looking for an international strategy for geography education Andrea Favretto, Scale factor and image resolution: some cartographic considerations Judit Ütő-Visi, Educational landscape and possibilities - Geography education (in the light of a survey) Lorena Rocca, Cristina Minelle, Francesco Bussi, Building geographical knowledge together: the case of a Geography teaching on line course THE LANGUAGE OF IMAGES, Edited by Elisa Bignante and Marco Maggioli MAPPING SOCIETIES, Edited by Edoardo Boria TEACHING FROM THE PAST

This book presents the core concepts of geographical education as a means of understanding global issues from a spatial perspective. It treats education, supported by high standards, approaches, methodologies, and resources, as essential in exploring the interactions of the world's human and environmental systems at local, regional, and global scales embedded in the nature of the discipline of geography. It covers topics such as climate change, sustainable development goals, geopolitics in an uncertain world, global crisis, and population flows, which are of great interest to geography researchers and social sciences educators who want to explore the complexity of contemporary societies. Highly respected scholars in geography education answer questions on key topics and explain how global understanding is considered in K-12 education in significant countries around the globe. The book discusses factors such as the Internet, social media, virtual globes and other technological developments that provide insights into and visualization - in real time - of the intensity of relationships between different countries and regions of the earth. It also examines how this does not always lead to empathy with other political, cultural, social and religious values: terrorism threats and armed conflicts are also essential features of the global world. This book opens the dialogue for global understanding as a great opportunity for teachers, educators, scholars and policy makers to better equip students and future citizens to deal with global issues.

Geographers regard fieldwork as a vital instrument for understanding our world through direct experience, for gathering basic data about this world, and as a fundamental method for enacting geographical education. The range of international geography and educational experts who contributed to this volume has demonstrated that the concept of fieldwork has a considerable history in the field of geography. They have demonstrated that the theoretical aspects of fieldwork have been interpreted differently in regions around the world, but the importance of fieldwork remains strong globally. A fresh look at the pedagogic implications for fieldwork in formal education offers ideas both for promoting it in geographical education and for maintaining its place in the geography curriculum. Audience: Forward-looking geographers and educators now recognise that alternative strategies, especially those involving the use of information technology, should be developed to reaffirm the centrality of fieldwork in geographical and wider education.

This book examines the evolution and innovation of teacher education in Singapore in the 21st century. It covers teacher education reforms in the conceptualising and implementing of the Teacher Education for the 21st Century (TE21) Model and discusses curriculum improvements that are aligned to new competencies; values development that re-envision teacher professionalism and calling; pedagogical changes that emphasise self-directed inquiry and technology-enabled learning; strengthened theory-practice linkages and enhanced teaching practices through school partnerships and mentoring; and impactful education research in areas such as assessment and developing teaching competencies, practices and mentoring. Teacher education in Singapore focuses on developing professional leaders in the field of education who are proactive problem-solvers and empowered researchers. It entails a long-term vision of education and an innovative approach to develop teachers with design skills and an inquiring mindset to understand learners in the fast-changing digital and mobile world. This book is aimed at scholars, researchers, policymakers, teacher educators and teachers as well as anyone interested in learning the philosophy behind Singapore's unique TE21 Model for the 21st century and beyond.
