Wouldn't life be better if you were free of the daily grind - the conventional job and boss - and instead succeeded or failed purely on the merits of your own investment choices? Free Capital is a window into this world. Based on a series of interviews, it outlines the investing strategies, wisdom and lifestyles of 12 highly successful private investors. Each of them has accumulated £1m or more - in most cases considerably more - mainly from stock market investment. Six are 'ISA millionaires' who have £1m or more in a tax-free ISA, a result which is arithmetically impossible without exceptional investment returns. Some have several academic degrees or strong City backgrounds; others left school with few qualifications and are entirely self-taught as investors. Some invest most of their money in very few shares and hold them for years at a time; others make dozens of trades every day, and hold them for at most a few hours. Some are inveterate networkers, who spend their day talking to managers at companies in which they invest; for others a share is just a symbol on a screen, and a price chart shows most of what they need to know to make their trading decisions. Free capital - money surplus to immediate living expenses - is the raw material with which these investors work. It can also be thought of as their psychological habitat, free from the petty tribulations of office politics. Lastly, free capital describes the footloose nature of their assets, which can be quickly redirected towards any type of investment anywhere in the world, without the constraints which institutional investors often face. Although it presents many advanced insights and valuable investment hints, this is not an overly technical book. It offers practical ideas and inspiration, with revealing detail and minimal jargon, making it an indispensable read for novice and experienced investors alike.

to the experienced professional, and is aimed also at the interested amateur investor. The theme of the book is that investment is simpler than non-professionals think it is in that the rudiments can be expressed in ordinary English, and picked up by anybody. It is not a science. But investment is also difficult. People on the outside tend to think that anyone on the inside should be able to do better than the market indices. This is not so. Picking the managers who are likely to do better is a challenge. Richard Oldfield begins with a candid confession of some of his worst mistakes and what they have taught him. He discusses the different types of investment, why fees matter, and the importance of measuring performance properly. He also outlines what to look for, and what not to look for in an investment manager, when to fire a manager, and how to be a successful client.
