Clinical Decision Making for the Physical Therapist Assistant is a practical guide to developing the clinical judgment essential to effective patient care. Co-authored by two prominent physical therapy educators, this informative reference addresses a skill that is crucial to the success of Physical Therapist Assistants (PTAs). Designed to integrate decision making into PTA education, it covers the types of decisions that must be made in physical therapy treatment and offers sound guidance on how to make them. Critical thinking questions and treatment activities are included with each chapter to enable students to apply what they've learned to real-life situations. This text is a valuable resource for intermediate and post intermediate physical therapist assistant courses. Designed Specifically for PTAs Provides clear guidance on making everyday clinical decisions Covers decision making in the context of major areas of physical therapy Integrates decision making into technical education Provides examples of decisions encountered in patient care

Meaningful Motion covers biomechanical and motor control principles and provides examples that address combining the principles of kinesiology with clinical occupational therapy practice. The text also has case studies and laboratory exercises specifically designed for occupational therapy students. The focus is on the concepts of kinesiology and excludes some of the mathematics that is used by biomechanists. Written by a kinesiologist who is also an occupational therapist, the text is tailored to the needs of the undergraduate and the practicing occupational therapist. Principles of kinesiology are combined with clinical practice. Includes case studies and laboratory exercises that have been specifically designed for occupational therapists. Focuses on concepts used in day-to-day practice. Discusses environments in which therapists work, including balance training, ergonomics, and leisure
