Dimension 3DISCIPLINARY CORE IDEAS—LIFE SCIENCES. The life sciences focus on patterns, processes, and relationships of living organisms. Life is self-contained, self-sustaining, self-replicating, and evolving, operating according to laws of the physical world, as well as genetic programming. Life scientists use observations, experiments, hypotheses, tests, models, theory, and technology to explore how life works.

Discussion Questions are meant to be thought-provoking. The student may not know the answers but should answer with their, thoughts, ideas, and knowledge of the subject using sound reasoning and logic. They should study the answers and compare them with their own thoughts. We recommend the teacher discuss the questions, the student's answers, and the correct answers with the student. This section should not be used for grading purposes. DVD: Each DVD is watched in its entirety to familiarize the student with each book in the course. They will watch it again as a summary as they complete each book.

Students may also use the DVD for review, as needed, as they complete each chapter of the course. Chapter Worksheets: The worksheets are foundational to helping the student learn the material and come to a deeper understanding of the concepts presented. Often, the student will compare what we should find in the fossil record and in living creatures if evolution were true with what we actually find. This comparison clearly shows evolution is an empty theory simply based on the evidence. God's Word can be trusted and displayed both in the fossil record and in living creatures. Tests and

or her own understanding of this issue. The author spent 30 years in a challenge to prove evolution, yet the more he learned, the more the truth of God's Word became apparent in the evidence and interviews he found while travelling the world speaking to scholars, museum officials, and viewing artifacts. While originally designed for classroom use, this course represents substantial value and flexibility for those who choose to home educate. The content and organization of the teacher manual, means that this course can be used by more than one student at a time, or even multiple times for a single student

Chapter Objectives: These are presented in a way that is perfect for students to answer in a notebook – having students copy the question and then answer in the notebook is even more helpful by putting the question and answer in proximity and context. These notes in combination with the chapter tests are excellent resources for preparing for sectional tests (if given) or a final exam at the end. Chapter objective can be shared with a student or students, and then kept in a binder for future use if needed. Students are also encouraged to keep these questions and

answers for pre-test studying. Chapter Exams: For each chapter, an A, B and C test is provided in the teacher's manual. Here is how you can extend your use of this material:

Option 1: You can follow the instructions in the book which are designed for one student.

Or you can modify one of the following options for your student, and still have enough course materials to use the course multiple times. Option 2: You could have up to three students taking the course at the same time, with each student having different tests if you assign each Test A to one student, Test B to another, and Test C to a

third. This insures each student has a different test and educators can better assess each student's individual understanding of the material at each point. Alternate sectional and final exams are included in this manual for your convenience. Option 3: Adjust the testing and materials to your educational program. For example, each chapter test could be used as additional worksheet material for one or more students, with only the included sectional exams to be administered. Or even just use a final exam for testing comprehension of material if you wish to assign several essays, project, or a

term paper based on individual questions of your choice from the exams and objectives or based on a chapter topic. This option would allow for additional writing and research opportunities and for some students, while engaging them more fully in comprehension and application of knowledge for this educational material. Sectional Exams: If used for a single student, a combination of "B" tests from the teacher's manual form the basis of a sectional exam. Alternate sectional exams are included in this package to give you added flexibility in using this course per your own educational program needs whether are

science problems. If understanding statistics isn't your strongest suit, you are not especially mathematically-inclined, or if you are wary of computers, this is the right book for you. Excel, a widely available computer program for students and managers, is also an effective teaching and learning tool for quantitative analyses in science courses. Its powerful computational ability and graphical functions make learning statistics much easier than in years past. However, Excel 2007 for Biological and Life Sciences Statistics: A Guide to Solving Practical Problems is the first book to capitalize on

these improvements by teaching students and managers how to apply Excel to statistical techniques necessary in their courses and work. Each chapter explains statistical formulas and directs the reader to use Excel commands to solve specific, easy-to-understand science problems. Practice problems are provided at the end of each chapter with their solutions in an appendix. Separately, there is a full Practice Test (with answers in an Appendix) that allows readers to test what they have learned.
