Location and Space-Economy: A General Theory Relating to ...

Space Economy. Space economy is the full range of activities and the use of resources that create value and benefits to human beings in the course of exploring, researching, understanding, managing, and utilizing space. The OECD Space Forum provides a definition of global space economy that comprises the space industry ' s core activities in space manufacturing and in satellite operations and other consumer activities that have been derived over the years from governmental R&D.

Space Economy

Location theory is a core theory and a common area of study in economic geography and regional economics. It originated from classical economics and can be traced back to the classical location theory of Germany. Economists found that locations and places are related to economic processes very early.

Location and Space-Economy. By Walter Isard. New York ...

The field of human geography — for which space, place and scale are foundational concepts — has developed conceptual tools with which to describe and assess the spatiality of socio-economic and political activity (the arrangement of social, economic and political life in geographical space). For example, economic geography developed the notion of the ' space economy ' to capture both the locational pattern of economic activities and their inter-linkages at any one point in time, and ...
