The green zone is the standard operating pressure and is usually between 1 - 1.5 bar. The red zone indicates the maximum safe operating pressure. If your pressure gauge is marked with a green zone and the needle has fallen below it, this is a sign that the gas boiler pressure is too low and action should be taken.

## [What to do if your boiler pressure is too low | Viessmann](#)

If the pressure is below 1 bar, then your boiler is likely to have low pressure. What to do if your boiler has low pressure Once you know that the drop in pressure hasn't been caused by a leak, or a leak has been fixed, you can re-pressurise your boiler to bring it back to the normal level (1 bar) - check the instructions that came with your boiler to find out the boiler pressure recommended by the manufacturer.

## [What Causes Low Boiler Pressure? Find out & Fix | Boiler Guide](#)

If your boiler pressure reads less than 1 bar, it's possible that you might have lost water from the system, which needs to be replaced. This is where that filling loop (or filling link) comes in again! If the pressure gauge on your boiler indicates high pressure (above 2.75 bar), then you may need to bleed a radiator to bring the level down to around 1.5 bar. This can be tricky and, occasionally, dangerous; due to high water temperatures.

How to repressurise your boiler. Topping up your boiler pressure is a simple fix and can be carried out without a heating engineer. First of all identify what sort of filling system you have and then follow the instructions, or watch our technical trainer show you how its done.

The ASME Boiler and Pressure Vessel Code Section VI, Recommended Rules for Care and Operation of Heating Boilers states that a try lever test should be performed every 30 days that a boiler is in operation and after any period of inactivity. 4. For low pressure steam boilers, the minimum pressure required for a try lever test is 5 psi. 5.
