ETAPS2000 was the third instance of the European Joint Conference on Theory and Practice of Software. ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences. This year it comprised 5 conferences (FOSSACS, FASE, ESOP, CC, TACAS), 5 satellite workshops (CBS, CMCS, CoFI, GRATRA, INT), seven invited lectures, a panel discussion, and ten tutorials. The events that comprise ETAPS address various aspects of the system development process, including specification, design,

implementation, analysis, and improvement. The languages, methodologies, and tools which support these activities are all well within its scope. Different blends of theory and practice are represented, with an inclination towards theory with a practical motivation on one hand and soundly-based practice on the other. Many of the issues involved in software design apply to systems in general, including hardware systems, and the emphasis on software is not intended to be exclusive.

As the world rolls out transformational 5G services, it has become increasingly clear that China may be able to disrupt—or even access—the wireless networks that carry our medical, financial, and even military communications. This insider story from a telecommunications veteran uncovers how we got into this

mess—and how to change the outcome. In *Wireless Wars: China's Dangerous Domination of 5G and How We're Fighting Back*, author Jon Pelson explains how America invented cellular technology, taught China how to make the gear, and then handed them the market. Pelson shares never-before-told stories from the executives and scientists who built the industry and describes how China undercut and destroyed competing equipment makers, freeing themselves to export their nation's network gear—and their surveillance state. He also reveals China's successful program to purchase the support of the world's leading political, business, and military figures in their effort to control rival nations' networks. What's more, Pelson draws on his lifelong experience in the telecommunications industry and remarkable access to the sector's leaders to reveal how innovative companies can take on the Chinese

threat and work with counterintelligence and cybersecurity experts to prevent China from closing the trap. He offers unparalleled insights into how 5G impacts businesses, national security and you. Finally, *Wireless Wars* proposes how America can use its own unique superpower to retake the lead from China. This book is about more than just 5G wireless services, which enable self-driving cars, advanced telemedicine, and transformational industrial capabilities. It's about the dangers of placing our most sensitive information into the hands of foreign companies who answer to the Chinese Communist Party. And it's about the technology giant that China is using to project its power around the world; Huawei, a global super-company that has surged from a local vendor to a \$120 billion-a-year behemoth in just a few years. For anyone curious about the hottest issue at the intersection of technology and

"[The authors] are pioneers. . . . Few in our industry have their breadth of knowledge and experience." —From the Foreword by Dave Thomas, Bedarra Labs Domain-Specific Modeling (DSM) is the latest approach to software development, promising to greatly increase the speed and ease of software creation. Early adopters of DSM have been enjoying productivity increases of 500–1000% in production for over a decade. This book introduces DSM and offers examples from various fields to illustrate to experienced developers how DSM can improve software development in their teams. Two

authorities in the field explain what DSM is, why it works, and how to successfully create and use a DSM solution to improve productivity and quality. Divided into four parts, the book covers: background and motivation; fundamentals; in-depth examples; and creating DSM solutions. There is an emphasis throughout the book on practical guidelines for implementing DSM, including how to identify the necessary language constructs, how to generate full code from models, and how to provide tool support for a new DSM language. The example cases described in the book are available the book's Website, [www.dsmbook.com](http://www.dsmbook.com), along with, an evaluation copy of the MetaEdit+ tool (for Windows, Mac OS X, and Linux), which allows readers to examine and try out the modeling languages and code generators. Domain-Specific Modeling is an essential reference for lead developers, software engineers,
