How do people fall in love on the Internet? Why is cyberspace such a violent place? This volume answers these and many other questions, focusing on the psychological well-being of Internet users and the commercial benefits of understanding online behaviour.

This two-volume set LNCS 11625 and 11626 constitutes the refereed proceedings of the 20th International Conference on Artificial Intelligence in Education, AIED 2019, held in Chicago, IL, USA, in June 2019. The 45 full papers presented together with 41 short, 10 doctoral consortium, 6 industry, and 10 workshop papers were carefully reviewed and selected from 177 submissions. AIED 2019 solicits empirical and theoretical papers particularly in the following lines of research and application: Intelligent and interactive technologies in an educational context; Modelling and representation; Models of teaching and learning; Learning contexts and informal learning; Evaluation; Innovative applications; Intelligent techniques to support disadvantaged schools and students, inequity and inequality in education.

In the post-genomic era, science is still challenged to explain the biosynthesis of complex polysaccharides and glycoconjugates. Unlike nucleic acids and proteins, the information needed for their biosynthesis is not clearly contained to this day within the genome of the various organisms. This means that no biosynthetic code has been revealed yet. As a result, there will be millions of structurally distinct, functional chemical species at the end of their biosynthesis. This book offers an up-to-date view on sulfated polysaccharide structure and function state of the art in different life kingdoms: bacteria, protista, plantae, fungi and animalia. The structure, activities and current thinking on the interplay between these two vital features (as well as ways to study them) are reviewed in the present book. The growing economical interest in sulfated polysaccharides due to their potential biotechnological use in different areas, such as pharmaceutical and food industries, are also commented on. The information within the chapters adds to other prior available literature; the intention of the authors was to extend and further develop the discussions related to glycobiology.

Research on nominalization, a process that gives rise to referring expressions, has always played a central role in linguistic investigations. Over the years there has also been growing evidence that nominalization constructions often extend to non-referential domains. They participate in noun-modifying expressions (e.g. genitive and relative clauses), subordinate clauses and topic constructions, finite structures with the nominalizers reanalyzed as TAM markers, and stance constructions with evaluative, attitudinal, evidential and epistemic overtones. This volume brings together historical and crosslinguistic evidence from more than 20 different languages representing six different language families spanning the Asian continent and the Pacific and Indian oceans to elucidate the strategies and grammaticalization pathways that give rise to both referential and non-referential uses of nominalization constructions. This collection highlights the diversity of strategies and at the same time the robust cyclical nature of change within and across languages. The combined diachronic and typological analyses in this volume are particularly valuable for linguistic research on diachronic morphosyntax and linguistic ‘ universals ’ , and are also an important supplementary cross-referencing tool for linguistic investigations of versatile and ubiquitous morphemes in under-documented languages.

This work describes the application of management theories in STEM (Science, Technology, Engineering and Mathematics) education systems. Two chapters examine STEM education on the K-12 national level and one chapter focuses on the higher education institutional level. All chapters are based on comprehensive research. Thus, it will appeal to teachers, school principals, researchers, graduate students, government policymakers, and all practitioners who care about STEM education in schools, academia and government. In each chapter, SWOT (Strengths, Weaknesses, Opportunities, and Threats) analysis is used as a managerial strategic tool for the examination of factors that focus either on internal circumstances (strengths and weaknesses), or external ones (opportunities and threats).

In the early morning hours of October 1, 1965, a group calling itself the September 30th Movement kidnapped and executed six generals of the Indonesian army, including its highest commander. The group claimed that it was attempting to preempt a coup, but it was quickly defeated as the senior surviving general, Haji Mohammad Suharto, drove the movement ’ s partisans out of Jakarta. Riding the crest of mass violence, Suharto blamed the Communist Party of Indonesia for masterminding the movement and used the emergency as a pretext for gradually eroding President Sukarno ’ s powers and installing himself as a ruler. Imprisoning and killing hundreds of thousands of alleged communists over the next year, Suharto remade the events of October 1, 1965 into the central event of modern Indonesian history and the cornerstone of his thirty-two-year dictatorship. Despite its importance as a trigger for one of the twentieth century ’ s worst cases of mass violence, the September 30th Movement has remained shrouded in uncertainty. Who actually masterminded it? What did they hope to achieve? Why did they fail so miserably? And what was the movement ’ s connection to international Cold War politics? In *Pretext for Mass Murder*, John Roosa draws on a wealth of new primary source material to suggest a solution to the mystery behind the movement and the enabling myth of Suharto ’ s repressive regime. His book is a remarkable feat of historical investigation. Finalist, Social Sciences Book Award, the International Convention of Asian Scholars

This two-volume set LNAI 12163 and 12164 constitutes the refereed proceedings of the 21th International Conference on Artificial Intelligence in Education, AIED 2020, held in Ifrane, Morocco, in July 2020.* The 49 full papers presented together with 66 short, 4 industry & innovation, 4 doctoral consortium, and 4 workshop papers were carefully reviewed and selected from 214 submissions. The conference provides opportunities for the cross-fertilization of approaches, techniques and ideas from the many fields that comprise AIED, including computer science, cognitive and learning sciences, education, game design, psychology, sociology, linguistics as well as many domain-specific areas. *The conference was held virtually due to the COVID-19 pandemic.

"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

Praise for the previous edition of *Explaining Psychological Statistics* "I teach a master's level, one-semester statistics course, and it is a challenge to find a textbook that is at the right level. Barry Cohen's book is the best one I have found. . . . I like the fact that the chapters have different sections that allow the professor to decide how much depth of coverage to include in his/her course. . . . This is a strong and improved edition of an already good book." —Karen Caplovitz Barrett, PhD, Professor, and Assistant Department Head of Human Development and Family Studies, Colorado State University "The quality is uniformly good. . . . This is not the first statistics text I have read but it is one of the best." —Michael Dosch, PhD, MS, CRNA, Associate Professor and Chair, Nurse Anesthesia, University of Detroit Mercy A clear and accessible statistics text— now fully updated and revised Now with a new chapter showing students how to apply the right test in the right way to yield the most accurate and true result, *Explaining Psychological Statistics, Fourth Edition* offers students an engaging introduction to the field. Presenting the material in a logically flowing, non-intimidating way, this comprehensive text covers both introductory and advanced topics in statistics, from the basic concepts (and limitations) of null hypothesis testing to mixed-design ANOVA and multiple regression. The Fourth Edition covers: Basic statistical procedures Frequency tables, graphs, and distributions Measures of central tendency and variability One- and two-sample hypothesis tests Hypothesis testing Interval estimation and the t distribution
